

“The Solution Is Science®”

Formulating advanced chemistry and lubricant solutions for the metalworking industry. Products proven to improve manufacturing performance, part quality and cost savings!

TANK-SIDE ADDITIVES

Consultant Lubricants, Inc

C-22 Biocide

Water Soluble Concentrate

- 1) Revives “Stale” Coolant** - Add 6 oz. per every 10 gallon of sump fluid. C-22 actively kills odor causing microorganisms over a 24 hour period, thus resetting coolant back to “near new” state. No need to drain and recharge with new coolant.
- 2) Resets pH Reserve** - Low pH indicates bacteria growth. C-22 instantly raises pH back to “new coolant” level.
- 3) Compatible with All Consultant Lubricants Coolants** - including full synthetic, semi-synthetic and soluble oils.
- 4) Safe For Operators** - Specifically designed for metalworking fluid applications. Do not exceed 1 shock treatment every 2 weeks. If coolant does not “revive” after second treatment, sanitize system with 0184-SCS and install new coolant.

The C-22 product is a concentrated dual germicide liquid used to shock treat microbial growth in emulsion and synthetic machining fluids. This product is not harmful to operators and should be added to the sump or tank fluid or pre-diluted mixtures.

The C-22 is compatible with soluble, synthetic, and semi-synthetic fluids.

DIRECTIONS:

Add the C-22 at 6 ounces per 10 gallons of diluted sump coolant. Do not treat sumps more than one time every 2 weeks: overuse may induce skin irritation. The C-22 treatment will extend coolant life and kill the source of odor generating microbes.
