

Complementing our existing offering, Satin Cross Buffs with 8-32 eyelets are now available. The structure and tensile strength of Satin Finishing materials provides cutting action from all directions, allowing Satin Cross Buffs to work well in tubes, concave areas or around tight angles. Multiple plies (up to three) create more surface area to conform and flex while pushed or pulled through inside diameters.

Features

- 2 or 3 ply for added structure or surface area
- 4 or 6 finger design for increased loft
- Clean or polish tube, pipe or cylindrical parts
- Easily reach around or under flanges
- Deburr cut tube or drilled holes
- Lightly chamfer recessed areas

Availability

Material: High Strength Satin
Grade: MED, FINE, VFN
Diameter: 3/4" to 3"
Eyelet: 8-32 or 1/4"-20
ID: XB
