No scientist's or laboratory's signature

No accounting for fluctuation in water table height

The report is meaningless.

Notes:

NYSDEC Criteria = Soil Cleanup Objectives (SOC) for Unrestricted, Residential, Restricted Residential, Commercial, and Industrial Uses and Protection of Groundwater

Residential SCO for iron is 2,000 mg/kg

ppm = parts per million = milligrams per kilogram

ft bgs = feet below ground surface

One or more grab samples from each boring were tested for volatile organic compounds.

Composite samples from paired borings were tested for hazardous waste characteristics, metals, pesticides, PCBs, herbicides, and semivolatle organic compounds.

Select grab samples were tested for PFAS compounds.

Iron is a naturally-occurring metal in Long Island soil.
