

## *Organic Tip:*

### **Fire Ants:**

2 oz. Orange Oil  
4 oz. Soil Conditioner  
4 oz. Molasses

Add all of the above items to 1 Gallon of water, and use as a drench over the Fire Ant mounds.

---

### **Tip: FERNS LOVE FISH**

Use 4 Tab. Liquid Fish Emulsion / 1 Gal. of Water when watering your ferns !!

### **Tip: SPIDERMITES**

To control Spidermites - use 4 Tab. Liquid Seaweed / 1 Gal. of water, and thoroughly spray plants ... be sure to get the underside of the leaves.

---

### **This 'Recipe' can be used as a Maintenance or Transplant Tonic**

There is no fertilization benefit, but it is full of Vitamins, Micronutrients, and Growth Hormones to promote a healthy plant.

#### **Transplanting:**

**To 1 Gal. Water Add:**

**2 Tablespoons Liquid Seaweed**

**1 Teaspoon SUPERTHRIVE**

#### **Maintenance**

**To 1 Gal. Water Add:**

**2 Tablespoons Liquid Seaweed**

**½ Teaspoon SUPERTHRIVE**

- *Can be used on Indoor Plants and Outside Plants, Trees, Shrubs, Flowers, Veggies*
  - *Caution ... Seaweed can stain, and care should be taken if using indoors.*
  - *It is best to use the mix fresh, and not store it for an extended period of time.*

Twin Oaks Nursery – 2107 Hwy 691 Denison, Texas (903) 463-2205

## Questions ??

### #1) Are Corn Meal & Corn Gluten Meal the Same ?? NO

**Corn Meal** is an organic fungicide ... used to control algae in ponds or lawns. Use: 20# /1000 Sq. Ft.,  
1# / 300-500 Sq. Ft. or  
2 Cups / 100 Sq. Ft.

**Corn Gluten Meal** is used as an organic Pre-Emergent. It stops seeds from germinating by inhibiting the growth of the seed's feeder root by causing a break down in the cell wall.  
It also is a source of nitrogen (9-0-0)

### #2) What is D. E. ???

**Diatomaceous Earth or D. E.** is made from shells of one-celled plants called diatoms.

When dry, they are very sharp, and cause soft bodied insects to dehydrate and die.

They are NOT HARMFUL to warm blooded animals, earthworms, and it is not a poison.

Insects must come in contact with D. E. to work.

---

## Kind Killers

BT (Bacillus thuringiensis)

Also Called Mosquito Dunks – A bacterial insecticide that kills mosquito larvae, but won't harm people, plants, or animals. Each Dunk treats 100 Sq. ft. of water and lasts 30 days. Just float it on the surface !!

Yellow Sticky Traps

Aphids, Whiteflies, and other small insects find the color Yellow Irresistible .... So they readily land on these plastic strips coated with adhesive and get stuck for life.

Diatomaceous Earth

This whitish powder consists of the fossilized skeletons of microscopic aquatic plants called diatoms. Then slugs, aphids and other soft-bodied pests contact the powder, it scours their skin and they will then die. If a heavy rain washes it away, you'll have to reapply it.
