

EQ901B

Input Level Setting for EQ901 B Series

This EQ901 B equalizer is set to the 0.9 Vrms setting and should be compatible with most preamplifier / amplifier installations and many tape monitor loops. Please note that some tape monitor and processor loops have output levels over 1.0 Vrms; in this case see below.

If you are experiencing excessive signal level or distortion, you may need to switch the unit to the 2.0 Vrms setting. See the User Guide for instructions.

Deer Creek Audio also can perform this adjustment for you. Simply send the unit to us, we will make the necessary customizations and return the unit at no charge. Please note, customers are responsible for all inbound shipping costs.
