## Club-A-Rama v2.0

WEEK 41

# TITAN IIIc MISSILE

1966

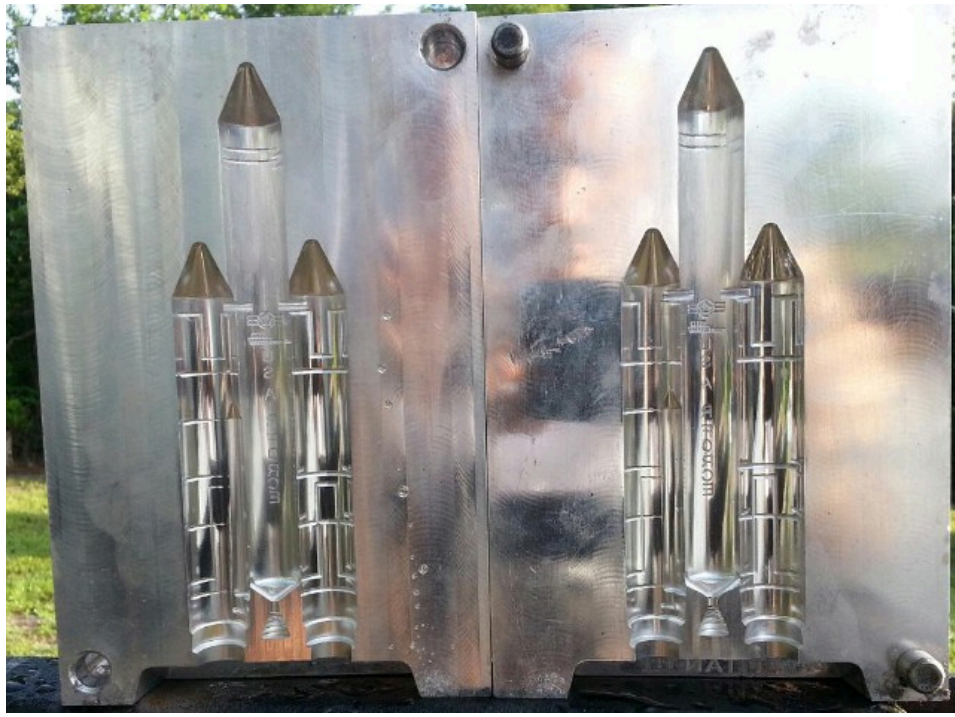

The **TITAN IIIc MISSILE** was a space booster used by the United States Air Force. It used a TITAN III core rocket with two large strap-on solid-fuel boosters to increase its launch thrust, and hence the maximum payload mass capability. The solid-fuel boosters represented a significant engineering advance over previous solid-fueled rockets, due to their large size and thrust, and their advanced thrust-vector control systems.

The Titan rocket family was established in October 1955. Titan I was the nations first two-stage inter-continental ballistic missile (ICBM). The Titan IVb was the last Titan rocket to remain in service, making a second-to-last launch from Cape Canaveral on April 30, 2005, followed by a final launch from Vandenberg Air Force Base on October 19, 2005.

Above is an original moldset of the **TITAN IIIc MISSILE**. Two originals exist in private hands. This week's reissued **TITAN IIIc MISSILE** was made from a copy of the original moldset, shown below:

The **TITAN IIIc MISSILE** is numbered 1171, dated by its unveiling in November 1966.

Disclaimers: The color and/or exact condition of the MOLD you get in the CLUB-A-RAMA may or may not be as shown. Not for children under 3.
