### **Flea Treatment Prep Sheet (Residential)**

Without teamwork, fleas can be very difficult to control. We have created this prep sheet for your benefit. By following these instructions, you greatly increase treatment efficacy and the ability to achieve control in a more desirable timeframe.

Please review the contents of this sheet and complete the instructions in the order indicated. Your property needs to be ready before the time of treatment. Should you not be able to prep in time for treatment, please call our office to reschedule no more than **three days before** the treatment date.

#### **Preparations to be done prior to our arrival:**

- All carpeted floor, including closets, should be cleared of boxes, clothing, toys, and any other items that will prevent treatment.
- Wash (in hot water) or discard all pet bedding materials. Anything discarded should be placed in a trash bag and set in an exterior container as soon as possible.
- Vacuum all wood, tile, and vinyl flooring.
- Vacuum all carpets and rugs.
- Vacuum all furniture, focusing between and under all cushions.
- Empty contents of vacuum cleaner into a trash bag and discard to exterior bin as soon as possible.
- We strongly urge for you to plan on having your pet(s) treated on the same day as your home.
- Make proper arrangements to stay out of your home for 3-4 hours after the treatment has been completed.

NOTE: Fish tanks / aquariums will need to be covered and pumps turned off. If possible, move any aquatic pets outside. Pet birds will need to be outside of the home for the duration of the treatment and 3-4 afterward. Fish and birds are highly susceptible to pesticides and treatment will not be done unless proper preparations have been made.

#### **After treatment is completed:**

- Don't clean carpeting or floors with detergents/cleaners for at least 30 days, as this will neutralize the products we've applied.
- Vacuum daily for at least one week, disposing immediately of contents to exterior trash bin each time.
- Repeat all preparations on the day before your scheduled follow-up treatment.***

Please understand that this process can take up to 30 days to resolve, and it may worsen before it gets better. Our products leave residuals for extended periods to help achieve and maintain control of the infestation. Should carpets be steam cleaned after treatment(s), we cannot guarantee results and any warranty offered will be voided. After the initial treatment, your follow-up should be set 14-21 days after. Exterior treatment may be necessary. Our technicians will advise you if this is recommended.
