OTHER SERVICES

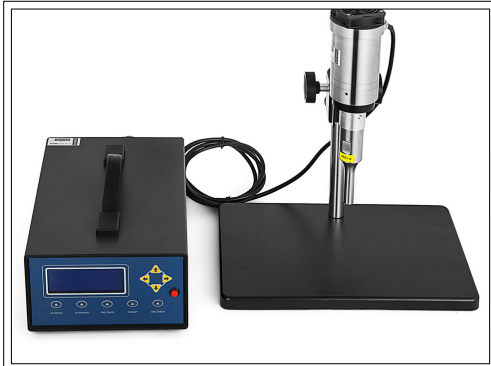

THC & CBD OILS

Procure your cannabis materials from our cultivation and extraction partners!

Extracts are always lab tested for milligram content, heavy metals & pesticides.

Delta 9 THC Distillate and CBD isolate are always available. Please inquire about strain specific or full spectrum material

NANO PROCESSING

What is Nano?

Short for "nano emulsification". This is a process that uses cannabis oil to create a water soluble emulsion.

Once "nanofied" and eaten, this cannabis oil emulsion will have an onset time of 5-15 minutes and an extremely high bioavailability.

This is an extremely efficient method of ingestion and is suitable for use in all of our products. Nano emulsified cannabis oil is an excellent replacement for traditional oil or alcohol based tincture and is an excellent choice for beverage production.

BOTTLING

Southern Maine Kitchen is a licensed state of Maine bottling plant.

Work with us to complete your beverage program!
