

For Severe Odors: Place one to three tablespoons of material directly on the odor source. Vary the amount used depending upon the intensity of the odor.

For Mild or Less Severe Odors: Place a small amount (from 1/4 teaspoon to a tablespoon) as required in one or two opposite corners of a room.

Material may also be placed directly on the floor, in a shallow dish, or in a receptacle such as an ash tray or rubbish container. Deodorant effect is adjusted by using more or less granules according to intensity of the odor.

DB-45 will deodorize the strongest odors for about one day. Remove old material when its odor is gone and replace with fresh odor control granules as needed. To retain effectiveness of unused material close and seal the container tightly.

DB-45 Odor Control Granules are used by pest control operators, cleaning contractors, police departments, veterinarians, pet groomers, hotels, motels, hospitals, morgues, and wherever a professional deodorant is required.

Contents may settle and compact slightly during shipping and storage. Loosen the material by gently tapping or shaking the container prior to opening.
