STANLEY®

ONE MAN, ONE VISION, 170 YEARS OF SUCCESS

In 1843, Frederick T. Stanley founded "The Stanley Works" – a small company that manufactured hinges, bolts and other door hardware in New Britain, Connecticut. His vision was to offer products that would become the first choice among professionals around the world.

Thanks to the increasing demand for his high-quality products, Mr. Stanley began exporting in the 1870s. Soon his rapidly growing business established its first production facilities outside the U.S. By 1920, STANLEY® brand hardware was preferred, and could be found on every continent.

Today STANLEY® is one of the world's most recognized and trusted brand names for hardware products. Providing outstanding quality and maximum security, STANLEY® has gained an excellent reputation as an expert for padlocks. You can count on STANLEY® as a strong retail partner just as you can count on its successful products presented in the following.

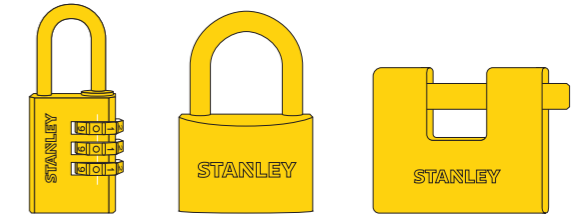

THREE PADLOCK RANGES AND BIKE LOCKS OFFERED BY STANLEY®

RELIABLE PADLOCKS FOR EVERY DAY-USE

INDOOR OUTDOOR ALL-WEATHER

- ✓ meet all demands of the mass market and drive your sales and profit

- ✓ solutions for quick stop or an all-day lock-up

COLOR CONCEPT

✓ For different application areas ✓ Better orientation ✓ Quick purchase decision

**ALL-WEATHER
PADLOCKS**

The Stanley® All Weather Padlocks with the blue label offer additional protection against corrosion near coastal environments by using exterior chrome plating. Perfect for use with boats and boat trailers.

**OUTDOOR
PADLOCKS**

The Stanley® Outdoor Brass Padlocks are the all-around padlocks for nearly every outdoor use: constructed with brass pins, stainless steel springs and a double locking hardened steel shackle, these padlocks are perfect for securing fences, sheds, containers or chains.

**SPECIAL
PADLOCKS**

Stanley® offers a variety of specialty locks like a Love Lock to show your love in a unique way or a Carabiner Lock with a leash to secure your belongings while you are on the go.

**HIGH SECURITY
BIKE LOCKS**

Stanley® High Security Bike Locks are ideal for all-day & overnight lock-ups in suburban and metropolitan areas when locking valuable bikes and scooters.

**INDOOR
PADLOCKS**

The green-labeled Stanley® Indoor Combination Padlocks are made with a high quality solid brass cage and wheels designed to provide basic protection for indoor applications like lockers or tool boxes.

**TRAVEL
PADLOCKS**

The Stanley® TSA Padlocks are the perfect companion for travelers around the world. Travel Sentry Approved (TSA) padlocks can be opened and re-locked with a special key by the international security administration at every airport worldwide without destruction, and can even show you if your luggage was screened. They are available in different colors, surfaces, and shapes to personalize your baggage.

**MEDIUM SECURITY
BIKE LOCKS**

Medium Security Bike Locks with a flexible steel cable are made for locking bikes in suburban and public areas for a few hours or all-day long. Available in combination and keyed versions.

**STANDARD SECURITY
BIKE LOCKS**

Standard Security Bike Locks are ideal for quick stops and hourly lock-ups. Available in combination and keyed versions.

Garantie 25 ans.

The Stanley® Armored Padlock with a hardened steel case provides a high level of security for both professional and daily use. These padlocks utilize a hardened steel transverse bar that rotates to prevent saw attacks. To protect against drill attacks on the keyway, the cylinder employs an anti-drill plate. These features deliver the security that many other padlocks fail to provide which often results in property loss or damage.

Armored Padlock

- ❶ Steel Hardened Case.
- ❷ Hardened Steel Transverse Bar.
- ❸ Ball-Bearing Locking System.

GOOD TO KNOW

DOUBLE LOCKING SHACKLE

Internal locking mechanism engages both side of shackle providing higher security compared to single locking mechanism.

CHROME PLATED

This padlock has an outer layer of chrome which increases the hardness of the padlock and provides higher corrosion resistance for salty or caustic environments.

DUAL BALL BEARING

Stainless Steel ball-bearing mechanism which holds the shackle firmly in place and adds maximum protection against pry attacks.

ANTI PICK PIN

The anti pick pin has a special mushroom shape which makes it harder to pick and prevents the cylinder from being operated without a key.

SOLID BRASS BODY

The brass body provides protection for the internal mechanism of the lock. Brass is also a metal alloy with high corrosion resistance.

NO KEY REMOVAL

Key can be removed in closed position. Prevents accidentally locking the key inside or losing keys.

SHROUDED BODY

The padlock shackle is covered providing maximum protection against cutting and pry attacks. It prevents the use of traditional bolt cutters.

PROTECTION AGAINST DRILLING ATTACKS

A special disc rotates when the padlock cylinder is attacked by a drill. The drill turns loose and cannot penetrate the cylinder.

FROST TESTED

Frost tested Bike Locks are tested to 20 degrees celsius to ensure that the products can withstand extreme temperatures.

CUT RESISTANCE

Cable / shackle with good cut resistance.

SAWING RESISTANCE

Cable / shackle with good saw resistance.

WEBPAGE WITH PRODUCT FINDER

HOW TO CHOOSE A PADLOCK?

Use our padlock finder to find the right padlock for your application.

Just enter whether you prefer a padlock with a key or a combination padlock and what you want to secure with it. For example, do you want to secure your bag when travelling? Then a TSA Padlock is the right one for you. Or do you need a padlock for your chain? Then a Barrel Brass Padlock is the one you should use.

The padlock finder will provide you with padlock options according to your needs – even for bike locks.

PADLOCKS CERTIFICATION

Stanley key operated padlocks are internally tested and measured against the standards of several different certification institutions, including the Australian Standard (AS), American Standard for Testing and Materials (ASTM), and British Standard European Norm (BS EN) testing standards. Our goal is to be transparent with all of our quality and security claims, helping you choose the right products for all of your security needs

Intertek Certification

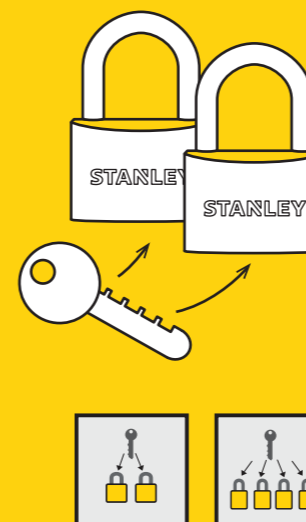

Our key operated padlocks are also tested by an independent third party lab, Intertek, an industry leader in assurance, testing, inspection and certification services, under the Australian Standard. The Intertek certification grades drive the security level claims on our packaging, and the testing certificates are available on www.safeguard-lock.com

SBSC Certification

SBSC is an accredited Swedish certification institute that certifies products in the fields of fire protection and crime prevention. Their unique expertise contributes to maintaining a high level of quality in the products that they test and certify. These tests cover durability, corrosion resistance and security features, and products that receive this certification will include the SBSC logo on the packaging.

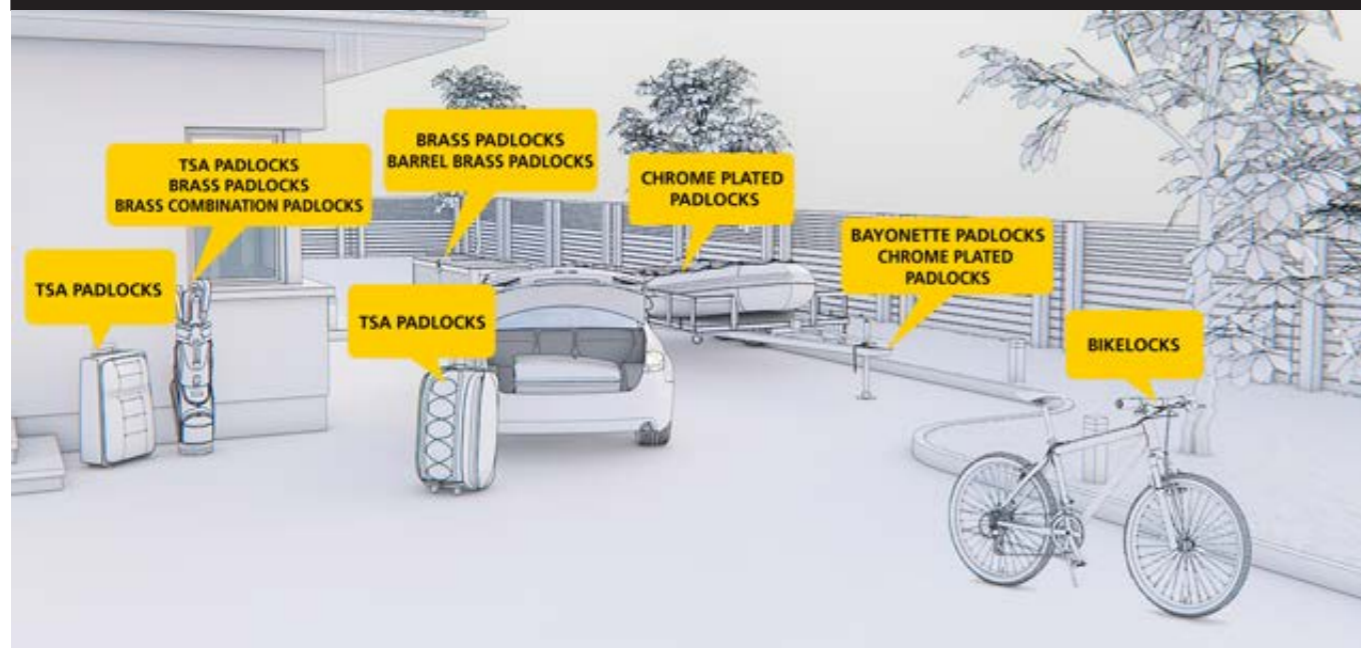

KEYED ALIKE

Keyed alike = one key fits all!

All multipacks are „keyed alike“ – this means that you can open all padlocks in the packaging with the same key. All multipacks come with 5 keys.

FAQS: 5 QUESTIONS TO FIND THE RIGHT PADLOCK

1 WHICH ITEM DO YOU WANT TO SECURE AND HOW VALUABLE IS IT?

- If the item is not so valuable you can use a padlock with a lower security level.
- If the item is valuable you should buy a padlock with a higher security level.

2 FOR WHICH APPLICATION DO YOU NEED THE PADLOCK?

- Define the usage of your padlock – indoor, outdoor or travel-high security or low security.
- Check if the padlock chosen matches the required performance of the padlock.
- Please notice that size alone is not the only indicator to choose the right padlock, it needs to have the right security level to match its purpose.
- Check to make sure the shackle will fit into the item you would like to secure.

3 ARE THERE SPECIAL REQUIREMENTS CONCERNING THE LOCK SYSTEM/ MECHANISM?

- If you need more padlocks that can be locked and unlocked with a single key, you should use „Keyed Alike“ padlocks.
- If many people would like to share one padlock, you can use a combination padlock. The advantage is that you do not need many keys for lots of people. Please notice that combination padlocks are suitable for applications with a lower security level.

4 WHAT IS THE RIGHT PADLOCK AND SHACKLE SIZE?

- The padlock should be the appropriate size for the required usage.
- Check additional padlock features like shackle size, diameter & material, body material & finish and to match the surrounding components and area.
- Short or long shackle size? The shackle size depends on the usage of the padlock. To pass through hasps and fittings with a long distance, a long shackle is required.
- Additionally the diameter and material of the shackle are further points to take into consideration for better security. Please pay attention to the shackle diameter and that it fits into the desired hole for locking.

5 WHAT TYPE OF BODY SHOULD I CHOOSE?

- The purpose of the padlock body is to protect the lock system against attacks.
- The main body types are Solid Brass, Laminated Steel and Armored Encased Brass.
- Solid Brass: Brass is a softer material that is easy for manufacturers to machine resulting in lower prices for customers, but brass padlocks are more susceptible to drill attacks than padlocks made of harder materials. Brass Padlocks typically have sharp corners which can scratch some surfaces.
- Laminated Steel: The body of this type is designed from separate thin steel plates which are riveted together. Low production costs enable low prices for customers.
- Armored Encased Brass: The brass body is encased in hardened steel for better protection against drilling attacks and to achieve a higher security level.

FAQS: PADLOCKS

KEY PADLOCKS

WHAT CAN I DO IF I HAVE LOST ALL KEYS FOR MY PADLOCK?

If you have lost all keys for your padlock it is not possible to make key copies to unlock the padlock.

ARE KEY COPIES POSSIBLE?

Yes. You can generate copies of your existing key in locksmith or security shops.

IS THERE A POSSIBILITY TO GET AN ADDITIONAL NEW PADLOCK THAT WORKS WITH MY ALREADY EXISTING KEY?

No. If you want to operate more padlocks with a single key, please purchase multiple pack „Keyed Alike“ padlocks.

IS THERE AN OPTION TO HAVE PADLOCKS THAT ARE OPERABLE WITH A SINGLE KEY?

Yes. Please purchase multiple pack „Keyed Alike“ padlocks that can be locked and unlocked with a single key.

WHAT DOES „KEYED ALIKE“ MEAN?

„Keyed Alike“ means that you can lock and unlock several padlocks with a single key.

COMBINATION PADLOCKS

ARE COMBINATION PADLOCKS SAFER THAN KEY PADLOCKS?

No. For a higher security you should use a key padlock, because the lock mechanism is stronger.

TRAVEL PADLOCKS

WHICH PADLOCK SHOULD I USE FOR TRAVELING?

For traveling you should use a TSA (Travel Sentry Approved) padlock. If you use a padlock that is not Travel Sentry Approved, you are taking a chance that the airport security will destroy the lock during their security check.

WHAT IS THE MEANING OF TSA?

TSA (Travel Sentry Approved) is the international standard for Travel Security. TSA (Travel Sentry

Approved) padlocks can be opened and re-locked with a special key by international security administration at every airport.

IS THERE A CHANCE THAT „NON AIRPORT SECURITY PEOPLE“ CAN GET THE „GENERAL KEY“ FOR TSA LOCKS?

No. Only airport security people have access to the general key to open and re-lock the TSA (Travel Sentry Approved) padlocks.

101 Facts | Bike locks

No **47**

Every **5 minutes** a bike is stolen in Europe.

<http://www.welovecycling.com/wide/2015/11/25/european-bike-thefting-champions-tips-in-number/>

101 Facts | Padlocks

Questions to find the right padlock

No **25**

What type of body should I choose?
The purpose of the padlock body is to protect the lock system against attacks. The main body types are Solid Brass, Laminated Steel, and Armored Encased Brass.
Solid Brass: Brass is a soft metal that is easy for producers to machine, thereby giving it a lower price for customers. But these padlocks are susceptible to drill attacks and usually have sharp corners which can scratch surfaces and objects they touch.
Laminated Steel: The body of this type is designed from separate thin steel plates which are riveted together. Low production costs enable low prices for the customers.
Armored Encased Brass: The brass body is encased in hardened steel for better protection against drilling attacks, thereby giving it a higher security level.

101 Facts | Bike locks

Security tips

No **68**

When securing your bike for longer periods of time, use the quick release function to remove the front tire and lock it together with the frame and the back tire, securing both to a fixed object such as street light or secure fence.

<http://www.safeguard-locks.com/en/security-moments/Bike%20locks.aspx>

101 Facts | Fun facts

Love locks

No **6**

Love Locks symbolize everlasting love and are attached to bridges, fences, gates, etc. The key is thrown into the river as a romantic gesture.

<http://www.historykeys.com/padlocks-history/history-of-love-padlocks/>

101 Facts | Bike locks

DID YOU KNOW...

Your Insurance will **not pay** for your loss if you did not secure your bike, home, or fence with a lock, or if the lock was too weak for the value of the possessions.

For example: A bike lock should cost about 10% of the value of your bike

So if your bike is about \$1 000, the lock should be around \$100

<http://die-hausratversicherung.eu/de/stahl-rauf/>
<http://www.fahradchloe-tests.com/>

REMEMBER!

WHILE IT'S NOT ALWAYS AN INDICATOR ON QUALITY, IN THE SECURITY WORLD, YOU GET WHAT YOU PAY FOR. A CHEAP LOCK WILL OFFER LITTLE RESISTANCE TO A THIEF.

THERE IS NO LOCK THAT CANNOT BE BROKEN. THE ONLY THING YOU CAN BUY IS THE TIME THAT IS NEEDED TO BREAK THE LOCK.

VIDEOS: STANLEY IN MOTION

LOYALTY 10 STANLEY S.W.

Check the instructions. It shows how to join two bolts to make your bike practically theft proof.

That was 5.5% more than in 2013!

PADLOCK CARE AND MAINTENANCE

Normally padlocks & bike locks need minimal care. For combination padlocks and bike locks there is no special maintenance required. To care for outdoor padlocks and key operated bike locks, lubricate the cylinder once or twice a year.

BIKE LOCK SECURITY TIPS

LOCK YOUR BIKE TO A FIXED OBJECT such as streetlight or secure fence. To make sure the lock is secured properly, pull your bike away from the lock to create a small amount of pressure.

THE BIKE LOCK SHOULD NOT TOUCH THE GROUND, so thieves cannot benefit from creating leverage to break the lock.

CHOOSE BUSY STORAGE LOCATIONS with high visibility, where thieves are less likely to operate.

ENSURE BOTH YOUR TIRE AND FRAME are securely locked.

IT IS BEST TO USE A TWO-LOCK METHOD, such as a U-Lock & Cable Lock, to maximize security when locking your bike.

WHEN SECURING YOUR BIKE FOR LONGER PERIODS OF TIME, use the quick release function to remove the front tire, and lock it together with the frame and the back tyre to a secure fixed object such as street light or secure fence.

THE LATEST TRICK OF THIEVES is to fill the keyhole of your Bike Lock with super glue, so you can't open it but they can come back later to steal your bike. So when locking your Bike Lock, make sure to fix it with the keyhole faced down.

HIGH SALES IN EVERY SEASON

Our recommendation: **STANLEY® calendar 2021.**
For covering all sales opportunities.

START INTO THE YEAR

JANUARY - MARCH

- CW 01 🏋️ New Years Resolutions at the Gym
