

VALLEY PRIMARY CARE ASSISTANCE

SUPPORTING YOUR PRACTICE, ENHANCING YOUR CARE

EMR Patient Chart and Preventative Care Audits

Despite our best efforts, and the algorithms provided by EMR, the complexity of patient care, ever changing guidelines and high practice volume can sometimes result in missed opportunities for patient chart completeness and preventative care opportunities. Valley Primary Care Assistance is pleased to provide case by case audits of patient charts to ensure that nothing is lost in the shuffle, or overlooked by EMR reports via;

- *Ensuring up to date documentation such as history, medications and problem list, mirroring your existing style*
- *Recommendations for and ordering of testing including but not limited to;*
 - *PAP testing*
 - *Breast Cancer Screening*
 - *CRC screening*
 - *AAA screening*
 - *Lung Cancer screening*
 - *Vaccinations*
 - *General preventative labs (lipids, DMT2 screening, Hepatitis C screening etc)*

This service is highly customizable, and can involve recommendations on potential preventative care options alone, or follow up action as required. As either a one time or recurrent service, this option ensures the most thorough and up to date handling of your patient data and preventative health
