

PMT (USA) LLC Redeems Controlling Membership Interest and Rebrands as SentrySciences.

Longmont, CO – May 4, 2021. PMT (USA) LLC, a leading provider of particle detection hardware and software for cleanroom management, quality assurance, and cGMP compliance, announced today that it had redeemed the controlling membership interest of Interservice Holdings GmbH, a multi-national distributor of particle measurement and microbiological contamination control equipment headquartered in Heimsheim, Germany. Terms of the transaction were not announced.

Glenn Brandon, founder and CEO of PMT (USA), said, “Interservice has been an incredible partner for us as we have developed and grown our business over the past decade. I will always be grateful for the support they have provided through the years, without which we could never have reached the important milestone of becoming an independent, employee-owned company.” “I look forward to continuing our relationship with Interservice and the PMT Group as we expand our business into new, cutting edge quality assurance technologies.”

The company also announced that it would be changing its name and rebranding as “SentrySciences™.” Related to the rebranding, Mr Brandon said, “Like a sentry guarding his post, the equipment, software and services we provide to our customers detect, identify and control harmful contaminants that disrupt manufacturing processes and create safety issues. The SentrySciences brand perfectly captures the role we play in supporting the success of our customers.”

This rebranding has no impact on our Quality System, employee structure or legal & organizational identifications (i.e. DUNS, FEIN, etc.).

In the fall of 2021, the company plans to launch its proprietary ParticleSentry^{AI} system, the first and only on-site artificial intelligence solution for development and at-line fill/finish quality management of biologic drugs.

About SentrySciences:

Founded in 2010, SentrySciences, Inc. (f/k/a PMT (USA) LLC) is a leading distributor and integrator of particle detection hardware, software and cleanroom management, quality assurance and cGMP compliance technologies for the pharmaceutical, aerospace, electronics, and semiconductor manufacturing industries. The company’s ParticleSentry^{AI} system is the first artificial intelligence software platform for managing protein drug quality from creation to patient.
