## Pearson Edexcel GCSE

In Chemistry (1CH0) Paper 1F

## Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk. Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Mark schemes have been developed so that the rubrics of each mark scheme reflects the characteristics of the skills within the AO being targeted and the requirements of the command word. So for example the command word 'Explain' requires an identification of a point and then reasoning/justification of the point.

Explain questions can be asked across all AOs. The distinction comes whether the identification is via a judgment made to reach a conclusion, or, making a point through application of knowledge to reason/justify the point made through application of understanding. It is the combination and linkage of the marking points that is needed to gain full marks.

When marking questions with a 'describe' or 'explain' command word, the detailed marking guidance below should be consulted to ensure consistency of marking.

| Assessment <br> Objective |  | Command Word |  |
| :--- | :--- | :--- | :--- |
| Strand | Element | Describe | Explain |
| AO1* | An answer that combines the <br> marking points to provide a logical <br> description | An explanation that links <br> identification of a point with <br> reasoning/justification(s) as required |  |
| AO2 | An answer that combines the <br> marking points to provide a logical <br> description, showing application of <br> knowledge and understanding | An explanation that links <br> identification of a point (by applying <br> knowledge) with <br> reasoning/justification (application <br> of understanding) |  |
| AO3 | 1 a and <br> $1 b$ | An answer that combines points of <br> interpretation/evaluation to provide <br> a logical description |  |
| AO3 | 2a and <br> $2 b$ | An explanation that combines <br> identification via a judgment to <br> reach a conclusion via <br> justification/reasoning |  |
| AO3 | 3a | An answer that combines the <br> marking points to provide a logical <br> description of the <br> plan/method/experiment |  |
| AO3 | $3 b$ |  | An explanation that combines <br> identifying an improvement of the <br> experimental procedure with a <br> linked justification/reasoning |

[^0]| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 ( a )}$ | C dissolving <br> A, B, D - these answers are about different processes | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( b ) ( i )}$ | sodium + hydrochloric acid (1) $\rightarrow$ <br> sodium chloride + hydrogen (1) | allow reactants either way round <br> allow products either way round <br> reject 'sodium chlorine' | (2) |
|  |  | allow <br> $\mathrm{Na}+\mathrm{HCl} \rightarrow \mathrm{NaCl}+\mathrm{H}_{2}(1)$ <br> $2 \mathrm{Na}+2 \mathrm{HCl} \rightarrow 2 \mathrm{NaCl}+\mathrm{H}_{2}(2)$ |  |
|  |  |  |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{1 ( b ) ( i i )}$ | B flammable | (1) |
|  | A corrosive has a different hazard symbol <br> C oxidising has a different hazard symbol <br> D toxic has a different hazard symbol |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( b ) ( \text { iii) }}$ |  | allow dots or crosses or mixture <br> allow other suitable symbols | (1) |
|  |  |  |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( c ) ( i )}$ | pH meter | allow universal indicator / pH <br> paper <br> ignore datalogger alone <br> ignore pH scale / pH strip <br> ignore indicator alone | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 ( c ) ( i i )}$ | 7 / seven | allow pH7 / PH7 | (1) |

Total for Question 1 = 7 marks

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| 2(a)(i) | C 2.8 .7 | (1) |
|  | A, B, D do not represent electronic configurations |  |

| Question number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 2(a)(ii) | An explanation linking <br> - in \{outer / $\left.3^{\text {rd }}\right\}$ shell (1) <br> - seven electrons (1) <br> or <br> - number of electrons in outer shell (1) <br> - is the same as group number (1) | allow last shell / outer ring MP2 depends on MP1 <br> allow 7 is the last number of the electronic configuration / OWTTE (1) | (2) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 ( b ) ( i )}$ | An explanation linking |  | (2) |
| - same number of electrons and <br> protons (1) <br> so charges \{cancel / balance one <br> another\} (1) | allow same number of positive <br> and negative charges |  |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{2 ( b ) ( i i )}$ | $37-17(1)(=20)$ (neutrons) | allow 20 without working |  |
| reject ‘- 20، | (1) |  |  |

| Question number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 2(b)(iii) | An explanation linking <br> - atoms \{of same element / with same number of protons\} / same atomic number (1) <br> - different number of neutrons / different mass number (1) | ignore electrons reject neutrons <br> reject protons /electrons | (2) |

Total for Question 2 = 8 marks

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(a)(i) | Haber | ignore spelling | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(a)(ii) | nitrogen + hydrogen $\rightleftharpoons$ ammonia (3) <br> reactants $\{\rightleftharpoons / \rightarrow\}(1)$ <br>  <br>  <br>  <br> $\{\rightleftharpoons / \rightarrow\}$ product (1) <br> $\rightleftharpoons(1)$ | allow reactant either way round <br> nitrogen + hydrogen $\rightarrow$ ammonia <br> $(2)$ <br> $\mathrm{N}_{2}+3 \mathrm{H}_{2} \rightleftharpoons 2 \mathrm{NH}_{3}$ (3) <br> incorrectly balanced equation <br> scores 2 max <br> allow: <br> correct formulae (1) <br> reversible sign (1) <br> balancing (1) | (3) |
|  |  |  |  |
|  |  |  |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(b) | one nitrogen (atom) and three <br> hydrogen (atoms) (1) | allow 1 N and 3 H (atoms) (1) | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(c)(i) | C ammonium nitrate <br> A, B, D are incorrect names |  | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 3(c)(ii) | An explanation linking any two from |  | (2) |
|  | - crops require fertilisers to grow (1) <br> - fertilisers contain N / P / K <br> compounds (1) <br> - promote plant growth (1) <br> increased yield (means greater <br> profits) (1) |  |  |

Total for Question 3 = 8 marks

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 4(a) | arranged by order of (relative) atomic mass <br> / (in Mendeleev's early periodic table) gaps <br> / missing elements / fewer elements / noble <br> gases were not present | assume answer refers to <br> Mendeleev's table unless <br> specifically referred to <br> modern table so reverse <br> arguments apply | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 4(b)(i) | aluminium chloride | reject ‘aluminium chlorine' | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 4(b)(ii) | neutralisation | allow acid + base <br> allow 'acid-base' <br> allow 'exothermic' | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{4 ( c ) ( i )}$ | $\mathrm{Ga}_{2} \mathrm{O}_{3}$ | allow $\mathrm{Ga}_{2} \mathrm{O} 3 / \mathrm{GA}_{2} \mathrm{O}_{3}$ <br> reject $\mathrm{Ga}^{2} \mathrm{O}^{3}$ | (1) |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{4 ( c ) ( i i )}$ | B ionic | (1) |
| A giant covalent structures do not conduct electricity at all <br> C metallic structures conduct when solid <br> D simple molecular structures do not conduct electricity when molten and <br> have low melting points |  |  |

| Question <br> number | Answer | Additional <br> guidance | Mark |  |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{4 ( d ) ( i )}$ |  |  |  | (2) |
|  | solid (1) <br> (regular arrangement <br> and touching) | gas (1) <br> (widely spaced, fewer shown) |  |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 4(d)(ii) | condensing / condensation | (1) |  |
| Question <br> number Answer Additional guidance Mark <br> 4(e) An explanation linking <br> - electrons (1) <br> • can move / are delocalised (1) MP2 depends on MP1 <br> allow charged particles can <br> move / are delocalised (1) (2) |  |  |  | |  |
| :--- |

Total for Question 4 = 10 marks

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(a) | $100-65-7-3(1)(=25)$ | 25 alone scores 1 | (1) |

| Question number | Answer |  |  | Additional guidance | Mark |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 5(b) |  | true | false | ( first tick given) | (3) |
|  | iron is a poor conductor of heat |  | $\checkmark$ |  |  |
|  | iron can act as a catalyst | $\checkmark$ |  | 4 correct ticks |  |
|  | iron forms compounds that are coloured | $\checkmark$ |  | $=3 \text { marks }$ <br> 3 or 2 correct ticks |  |
|  | iron has a low density |  | $\checkmark$ | $=2 \text { marks }$ |  |
|  | iron has a very high melting point | $\checkmark$ |  | $\begin{aligned} & 1 \text { correct tick } \\ & \text { = } 1 \text { mark } \end{aligned}$ |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(c)(i) | alloys stronger / pure metals weaker / <br> alloys more corrosion resistant | ignore harder <br> ignore 'more desirable <br> properties' | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(c)(ii) | $0.40 \times 30(1)(=12)$ <br> $\frac{12}{100}(1)(=0.12)(\mathrm{g})$ | $0.12(\mathrm{~g})$ without working (2) |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(d) | An explanation linking | allow highest rate of reaction at the <br> beginning of the reaction gives most <br> voltage (1) <br> allow reaction is complete when <br> voltage $=0(1)$ | (2) |
|  | $\bullet$ voltage decreases |  |  |
| as \{reactant / transition |  |  |  |
| metal\} used up |  |  |  |

Total for Question 5 = 9 marks

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| 6(a) | B gold | (1) |
|  | A, C, D - these metals too reactive to exist as uncombined elements |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 6(b) | Any two from <br> preserves ore reserves / reduces waste <br> /reduces energy needed for metal <br> extraction / preserves \{habitats/ <br> landscape / resources\} | allow reduces carbon emissions | (2) |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{6 ( c )}$ | $2 \mathrm{Fe}_{2} \mathrm{O}_{3}+\mathbf{3 C \rightarrow \mathbf { 4 ~ F e } + \mathbf { 3 } \mathrm { CO } _ { 2 }}$ | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 6(d) | $\frac{42.5}{5000}(1) \times 100(1)(=0.85)$ | 0.85 alone scores 2 | (2) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{6 ( e )}$ | An explanation linking | (2) |  |
| • carbon / C (1) <br> gained oxygen (to form carbon <br> dioxide)(1) | reject other elements for MP1 <br> allow oxidation is gain of oxygen <br> / oxidation is loss of electrons (1) |  |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{6 ( f )}$ | $\mathrm{Ti} \frac{12}{48}=0.25$ and $\mathrm{O} \quad \frac{8.0}{16}=0.5(1)$ <br> simplest ratio $1: 2(1)$ <br> empirical formula $\mathrm{TiO}_{2}(1)$ | working must be shown to gain full <br> marks | (3) |
| allow TE |  |  |  |
| $\mathrm{Ti} \frac{48}{12}=4 \quad$ and $\mathrm{O} \frac{16}{8.0}=2 \quad(0)$ | simplest ratio 2:1 (1) <br> empirical formula Ti2O (1) <br> allow (1) for formula with numbers <br> obtained from 1st step with no <br> simplest ratio |  |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| 7(a)(i) | An explanation linking <br>  <br>  <br>  <br>  <br>  <br>  <br>  <br> - both \{air/oxygen\} and water needed for rusting (1) <br> - tube a - \{air/oxygen\} and water present (1) <br> - tube c - only dry \{air/oxygen\} present / no water (1) | (3) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{7 ( a ) ( i i )}$ | No rusting / remains clean / does <br> not corrode | ignore any statements about <br> magnesium | (1) |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| 7(a)(iii) | C the iron is oxidised <br> The only correct answer is C | (1) |
|  | A is not correct - hydration is a different reaction <br> B is not correct - neutralisation involves an acid <br> D is not correct - reduction is loss of oxygen or gain of electrons which <br> does not happen here |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{7 ( b )}$ | improve appearance / more <br> corrosion resistant | allow suitable alternative answers <br> ignore cost | (1) |

| Question <br> number | Indicative content | Mark |
| :--- | :--- | :--- |
| *7(c) | Answers will be credited according to candidate's deployment of <br> knowledge and understanding of the material in relation to the <br> qualities and skills outlined in the generic mark scheme. <br> The indicative content below is not prescriptive and candidates are not <br> required to include all the material that is indicated as relevant. <br> Additional content included in the response must be scientific and <br> relevant. | (6) |
|  | AO1 ( $\mathbf{6}$ marks) <br> - suitable use of aluminium eg cooking foil <br> - related property - malleable, low toxicity, low reactivity <br> - suitable use of copper eg water pipes <br> - related property - low reactivity <br> - suitable use of gold eg electronic contacts <br> - related property - does not corrode, good electrical conductor <br> - suitable use of brass eg pins for electric plugs <br> ( related property - strong and hard wearing <br> - suitable use of magnalium eg aircraft parts <br> - related property - low density |  |

| Level | Mark | Additional Guidance | General additional guidance - the decision within levels Eg - At each level, as well as content, the scientific coherency of what is stated backed up by planning detail will help place the answer at the top, or the bottom, of that level. |
| :---: | :---: | :---: | :---: |
|  | 0 | No rewardable material. |  |
| Level 1 | 1-2 | Additional guidance <br> Identifies at least one property OR use of at least one metal or alloy and attempts to relate it to a suitable use. | Possible candidate responses <br> - aluminium has a low density (alone) <br> - gold can be used in jewellery (alone) <br> - copper is used in wiring because it is a good conductor of electricity (upper part of level) |
| Level 2 | 3-4 | Additional guidance <br> Identifies at least one property of two metals OR alloys and links this to their uses. | Possible candidate responses <br> - copper and gold are both used in electrical wiring because they are good conductors of electricity <br> - copper is used in wiring because it is a good conductor of electricity. Gold is used in jewellery <br> - magnalium has a low density so can be used in aircraft parts. Gold can be used in jewellery because it is unreactive - upper part of level |
| Level 3 | 5-6 | Additional guidance <br> Identifies properties of at least one metal AND one alloy and explains their uses related to these properties. | Possible candidate responses <br> - copper is used in electrical wiring because it is a good conductor of electricity so a current can pass through it. Magnalium is used in aircraft parts because it has a low density <br> - gold is used in jewellery because it is unreactive and so will not cause irritation to the wearer. Brass is used for making electrical plug pins because it is strong, so will not break easily - upper part of level |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{8 ( a ) ( i )}$ | A description including | allow flame / ignite gas <br> ignore 'squeaky pop test' / <br> glowing splint |  |
| • apply lighted splint (1) | second mark is dependent on first |  |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{8 ( a ) ( i i )}$ | B oxygen | (1) |
|  | The only correct answer is B <br> sulfate solution |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{8 ( a ) ( i i i )}$ | • electrical energy / electricity (1) | allow electric current | (2) |
|  | -\{decomposes / breaks down / <br> splits\} \{electrolytes / (ionic) <br> compounds / substances\} (1) | allow separates ions <br> reject decomposing elements for <br> MP2 |  |

| Question number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 8(b) | final answer of $114\left(\mathrm{~g} \mathrm{dm}^{-3}\right)$ with or without working (3) $\begin{aligned} & \text { OR } \\ & \frac{28.4}{250}(1)(=0.1136) \\ & 0.1136 \times 1000(1)(=113.6) \end{aligned}$ $=114\left(\mathrm{~g} \mathrm{dm}^{-3}\right)(1)$ | allow ECF throughout $\begin{aligned} & \frac{250}{1000}\left(\mathrm{dm}^{3}\right)(1)\left(=0.250\left(\mathrm{dm}^{3}\right)\right) \\ & \frac{28.4}{0.250}(1)(=113.6) \end{aligned}$ $\begin{aligned} & \mathrm{OR} \\ & \frac{1000}{250}(1)=4 \\ & 4 \times 28.4(1)(=113.6) \end{aligned}$ <br> Must have 3sf for MP3 0.114 scores 2 <br> Lose MP1 if rounded incorrectly e.g, to 0.11 or 0.113 but mark on | (3) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 8(c) | $\mathrm{Na}_{2} \mathrm{SO}_{4}$ | allow SO4Na2 <br> allow upper case A <br> ignore any charges on ions <br> reject non- subscript 2 \& 4 | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{8 ( d ) ( i )}$ | measuring cylinder(s) | allow alternative apparatus <br> eg graduated test-tube, burette, <br> Hofmann voltameter, gas syringe | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 8(d)(ii) | light bulb / lamp / ammeter | allow alternative equipment <br> eg buzzer <br> ignore voltmeter / data-logger <br> alone | (1) |

Total for Question 8 = 11 marks

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{9 ( a ) ( i )}$ | Left : $\mathrm{H}_{2} \mathrm{SO}_{4}(1)$ | reject superscript numbers | (2) |
|  | Right : $\mathrm{CuSO}_{4}(1)$ | reject superscript numbers |  |
|  |  | incorrect balancing max 1 |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| 9(a)(ii) | $63.5+12+3 \times 16(1)$ | (2) |
|  | $123.5(1)$ |  |

| Question <br> number | Answer | Mark |
| :--- | :--- | :--- |
| $\mathbf{9 ( a ) ( i i i )}$ | A bubble the gas through limewater, limewater turns cloudy | (1) |
|  | The only correct answer is A <br> B is not correct because test shows only an acidic gas <br> C is not correct because test shows only that the gas does not support <br> combustion <br> D is not correct because test shows only an acidic gas |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 9(b)(i) | Any TWO from | ignore references to pH | (2) |
|  | • no more bubbles / fizzing (1) | no further change in colour (1) <br> \{solid / copper carbonate\} <br> more \{solid / copper carbonate\} <br> dissolves (1) | ignore no more copper carbonate <br> will react |

| Question number | I ndicative content | Mark |
| :---: | :---: | :---: |
| *9(b)(ii) | Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme. <br> The indicative content below is not prescriptive and candidates are not required to include all the material that is indicated as relevant. Additional content included in the response must be scientific and relevant. <br> AO2 and A03 ( 6 marks) <br> - filter mixture <br> - using filter funnel and paper <br> - collect filtrate / copper sulfate solution <br> - in conical flask / suitable (named) container <br> - pour into an evaporating basin <br> - heat on water bath / on tripod over Bunsen <br> - until half volume / concentrated / partially evaporated / crystals start to appear around the edge <br> - remove from heat and cover with filter paper <br> - allow to cool <br> - and crystallise <br> - separate crystals using a suitable method <br> - put/place crystals onto absorbent/filter paper <br> - dry in a warm place | (6) |

| Level | Mark | Additional Guidance | General additional guidance - the decision within levels Eg - At each level, as well as content, the scientific coherency of what is stated backed up by planning detail will help place the answer at the top, or the bottom, of that level. |
| :---: | :---: | :---: | :---: |
|  | 0 | No rewardable material. |  |
| Level 1 | 1-2 | Additional guidance Identifies relevant practical operations | Possible candidate responses <br> - filter the mixture (alone) <br> - allow solution to crystallise (alone) <br> - filter mixture using filter paper - upper part of level |
| Level 2 | 3-4 | Additional guidance <br> Some correct sequencing of correct operations | Possible candidate responses <br> - filter mixture and collect solution/liquid <br> - evaporate solution and leave to cool <br> - sequence with detail - upper part of level |
| Level 3 | 5-6 | Additional guidance <br> Sequence of operations to include two from filter to remove excess copper carbonate, crystallise (includes heating \& cooling), separate crystals \& dry | Possible candidate responses <br> - filter mixture then cool and crystallise <br> - evaporate/heat solution then allow to cool and crystallise <br> - sequence with detail - upper part of level |

Total for Question 9 = 13 marks

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 0 ( a ) ( i )}$ | K, L, J, N, M |  | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 0 ( a ) ( \text { ii } )}$ | (volumetric) pipette | allow burette <br> reject dropping pipette <br> ignore balance | (1) |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 0 ( b ) ( i )}$ | An explanation linking <br> - solution from titration contains an <br> indicator (1) | (2) |  |
|  | -therefore second solution used <br> with no indicator / indicator would <br> contaminate salt (1) | MP2 dependent on MP1 <br> allow original mixture was <br> contaminated by indicator so <br> doesn't form a pure salt (2) |  |

| Question <br> number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| $\mathbf{1 0 ( b ) ( i i )}$ | final answer of $120 \%$ with or without <br> working (2) <br> OR <br>  <br>  <br> $\underline{0.84}(=1.2)(1)$ <br> $\underline{0.70} \times 100(=120(\%))(1)$ | (2) |  |
| 0.70 | allow any fraction $\times 100(1)$ |  |  |

| Question <br> number | Answer | Additional guidance | Mark |
