* Tick Size is the minimum price fluctuation

**Tick Price is the value of Tick Size.

***Notional Value = Contract Size * Commodity Price.

(A) Current market price when you open your trade

(B) Margin per lot depends on 1:100 leverage. Please note that you can only change leverage on GOLD and Silver from your BackOffice.

(C) Market close at 23:50 on Fridays.

Margin Example

Margin for Metals will be calculated as the following:

Lots × Contract Size × Market Price /Leverage.

Example (1): If an account has 1:400 leverage and opens a 1 lot of XAUUSD (at 1300) , Margin requirement: 1 lot × 100 Ounces × 1300 /400 = \$325.

Example (2): If an account has 1:500 leverage and opens a 0.6 lots of XAGUSD (at 17) Margin requirement: 0.6 lots × 5000 ounces × 17 /500=\$102.

Margin for Energies will be calculated as the following:

Lots × Contract Size × Market Price × 1/100

For example: Margin requirement for 1 lot of USOIL.cfd (at 41.50) 1 lot × 1000 Barrels × 41.50 ×1/100 = \$415.

Please note that leverage on Energies can not be changed form your BackOffice

Profit Calculations

Profit for all metals and energies shown above will be calculated as the following:

(close price-open price)× Contract Size × Lots

For example: If you bought 5 lots of USOIL.cfd at 41.00 and you managed to close your trade at 41.50, then your profit will be (41,50-41,00) × 1000 Barrels × 5 lots = \$2500.

Please note that the above way of profit calculations would apply to losses calculations as well in the same manner.
