

## ABOUT COMPLETE PEST MANAGEMENT

Our business vision is founded on the principles of industry knowledge, dedication, honesty and customer satisfaction.

John & Javier, our management team, have a combined 62 years of service in the valley. John is a Viet Nam veteran and former NYPD officer. In 1978 he founded Patriot Pest Control here in Phoenix. In 1987 he moved to a management position with Wilson Pest Management ultimately acquiring the company in 1994. John has been an innovator in Termite treatment techniques working closely with Dow on the Sentricon Baiting System and BASF with their great product Termidor. He learned the weed and turf and ornamental application industry from Walter F. Wilson Jr., a respected pioneer in this area off the pest control industry.

Javier is a life time resident of Arizona and attended the University of Arizona. He is a dedicated professional with a drive and personality which has made him a "natural" in the service industry. Javier's entry into the pest control industry began with Orkin Exterminating in 1990.

Javier then joined Wilson Pest Management team as sales manager and along with John acquired ownership of the company in 1994. There are few within our industry that can challenge Javier's knowledge and dedication. Over the many years, our experience in pest, weed and termite control along with turf and ornamental services provides our customers with the comfort of knowing they have selected the right company to address their pest control service needs. As a team we present the willingness to work hard for you, our customer, with the goal of earning your satisfaction with the service we provide. We look forward to being your choice!

## PEST CONTROL SERVICE

- ★ By definition pest control is the process of minimizing or removing a wide range of undesirable insects and other pests from spaces occupied by people. The actual process can take place in the home, in a place of business, or in a public building. Controlling pests normally involves using various methods to prevent them from entering the space, and to kill any pests that have already established a presence within the space.
- ★ Integrated Pest Management Programs for your home or business designed to maximize results with targeted applications where problems exist.
- ★ Licensed & Experienced Technicians
- ★ Punctual Reliable Service
- ★ Positive Control Of:  
Spiders – Scorpions – Crickets – Ants  
Earwigs – Rodents – Bees – Bed Bugs

602-900-9996

## TERMITE CONTROL SERVICE

- ★ Without complicating this subject may we say that termite infestations are a totally undesirable situation which should be addressed to prevent serious physical damage to the wood components of a structure.
- ★ There are many species of termites of which only 17 are indigenous to Arizona. Of the 17 there are 3 species of any importance, Dampwood and Drywood termites which are of minimal impact and Subterranean termites which have a severe economic impact to our dwellings in our southwest deserts.
- ★ The key to the control of termites is the thoroughness and care of the applicator to install complete and effective barriers to exclude all subterranean termites. Additionally baiting systems can and do augment liquid chemical applications.
- ★ With 37 years termite service to the valley. Complete Pest Management feels that the control of your termite problem is as close as your telephone or the Internet.
- ★ Renewable warranties available.

## WEED CONTROL SERVICE

- ★ Weed control is the botanical component of pest control, which attempts to stop weeds, from competing with domesticated plants. Many strategies have been developed in order to contain these plants.
- ★ Let us design a weed control program for you to keep your landscape clean and attractive
- ★ The key to effective weed control will be two or more years of continuous pre-emergence herbicide use. This will result in better weed control than a single year of use because continuous use reduces the number of weed seeds in the soil. Control of 98% of 10,000 weed seedlings per 1000 square feet is not acceptable (200 weed seedlings survive) but 98% control of 200 weed seedlings per 1000 square feet would be acceptable (4 seedlings survive). Additionally timing for the application of pre-emergent is key for effective control. Fall (October, November and December) is the best time to apply pre-emergent herbicides.
