

An Engineering Cover Letter for James O'Flanagan

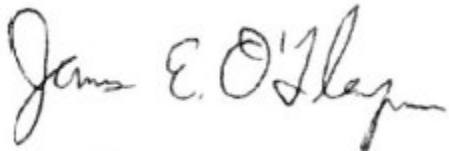

Hello and thank you for considering my application for this position.

My name is Jim O'Flanagan, and I am a husband and father to my family; I am also an engineer with a plethora of experience across several engineering disciplines. I am married to my wife Becca, my two children are Azra and Elijah, and my two dogs are Buffy and Bones. I have two engineering degrees; one is a BS in Computer Engineering from Case Western Reserve University; the other, an MS in Engineering Management with FEA specialization from The University of Akron. My twenty-two year engineering career has been spent working projects at the intersection of computation, physics, engineering, and management science.

And what an adventure it's been! I have had stops automotive, tires, national defense, naval nuclear, international shipping logistics and transportation engineering, naval nuclear engineering, and oil & gas natural gas plant extraction equipment design; I have had experience in a great many places.

That makes my skillset very unique, and it means I can solve engineering problems for you others cannot.

I would love to work on a great engineering project with you! Thanks for considering me.

A handwritten signature in black ink that reads "James E. O'Flanagan". The signature is written in a cursive, flowing style.

James O'Flanagan
