Cover Letter Summary

With over two decades of experience, *"Jim"* is the president and principal engineer at OAPSIE Inc., a contract engineering agency that handles complex engineering problems in the mechanical and computational domains.

Greetings

Hello, my name is James O'Flanagan. I am an engineer who loves his family and is very excited about being an engineer! I was born, raised, and educated in Northeast Ohio, and I currently live with my family in Munroe Falls.

I am interested in working as an engineer for your company. I have been leading software development teams for over 20 years, and I have a Master's Degree in Engineering Management. I believe I can do the same for Ametek.

Ametek is a company that is well known to me. I previously worked with Gordon Brunson, who was a long-time engineer at the Ametek Kent Office. I know Genna Mintz very well on a personal basis. Both recommend Ametek highly!

Some interesting things about me:

- I am a very active expert voice on Artificial Intelligence on the LinkedIn platform, speaking mostly on Generative AI, and its application(s) to the field of engineering.
- I talk about conservation and the environment all the time in my online Newsletters. I also dabble part-time in analyzing old public engineering projects on my various Newsletters. The latest one I am working on is the geo-engineering that happened to create the village of Peninsula, Ohio over the years. I also have one for the lake at Munroe Falls Metroparks. Fascinating stuff!
- In the past year I have been working on a self-funded technology development program that resulted in a patent and a presentation at ASME IMECE in November 2023. Since that project is concluded, I am looking to move on to my next one!

I would very much like to work for a company that I admire. I look forward to hearing from you and speaking about the open engineering position.

Thanks in advance,

James E. O'Flanagan

James O'Flanagan
