Pasture Raised Chicken Order Sheet

Our chicken is pasture raised and fed only Non-GMO feed provided by Resaca Sun Feed's. Their feed is Non-GMO project verified and of the highest quality available. After the hatching/brooding period, our Cornish cross broilers are raised out on fresh pasture. The chickens are periodically moved around the pasture to give them fresh grass/greens and insects to eat. No herbicides, pesticides, fungicides, or artificial fertilizers are used on the chickens pasture or anywhere near them. We also do not use any antibiotics with our chickens. Our goal is to provide the most wholesome meat possible where you do not have to worry what is in your meal. The chicken not processed in an USDA facility, but processed on the farm per local guidelines. We process on the farm to prevent transportation stress on the animals.
