

Dear Sir/Madame,

March 2024

For the last 24 years my associates and I have funded the creation of **Modular Organic Regenerative Environments** (MORE) in Ghana. We have made over 30 trips to Ghana with a focus on how to provide low cost and no cost green services to suit the needs of Ghana.

The MORE Program accomplishes several primary needs of Ghana. Feeding 50 million people in 2050 can only be accomplished with Agroforestry by promoting reforestation and strengthening biodiversity. With 1/3 of food coming from trees. We believe Ghana needs to be covered with trees again. This is easily accomplished with MORE Tree Nurseries (MTN's) in school yards.

Since the beginning of 2023 we have set up MTN's in 200 school yards resulting in one million trees planted by students. The MTN system has a cost of only \$500 and generates 25 million Cedis (two million USD) worth of produce and products across the next 20 years. There is no investment in history that offers the returns of MTN's. 5,000 products are made from trees which are a perpetually regenerative resource.

With a very small government or NGO investment Ghana can tap into the endless human and solar resource that will double and triple the size of the economy in less than 20 (twenty) years. MTN's can be very easily deployed into school yards across Ghana and students can plant 50 million trees a year with only 10,000 schools receiving an MTN each year. This would only be 40% of the 25 thousand schools across Ghana.

Another major issue we address is food loss due to no refrigeration. 50% of all food is lost between field and table. There is no food security without refrigeration. MORE Cold Space (MCS) solves this problem by converting waste plastic into insulating building materials called MORE EcoBricks. One EcoBrick is 50 empty sachet water bags packed into a 500 ml plastic water bottle. MCS is a very low-cost business with very high returns by cutting food loss by 90%. Profiting from conservation will soon be big business.

Further we offer a low-cost way to clean up all the waste plastic bags choking the waterways and top soil by turning trash into cash with a range of small business opportunities that will fit in small yards, school grounds, or community centers. All MORE micro-enterprise cottage businesses offer immediate cash flow in the first 90 days and pay for themselves within the first year from profits or food saved. No program on earth offers the profits and benefits of the MORE programs and systems.

We invite everyone to use the free training offered on this website, TREESFORTRASH.COM MORE Foundation Group is a US based non-profit privately funded by generous individual Americans. All are welcome to take advantage of this knowledge and allow nature to regenerate itself and allow all people to live in balance with natural resources while healing the earth.

Kindest regards and best wishes to all people wishing to live a peaceful life with prosperity.

Jim Riordan
Director and founder
