

Raising the bar for utility cost recovery and conservation.

- The widest selection of wireless utility submetering products
- Turnkey solutions for every environment
- Technical innovation and intelligent design

Your partner for advanced submetering solutions of every kind and for every environment.

Tehama Wireless manufactures the widest variety of Automatic Meter Reading (AMR) equipment for multifamily and commercial properties. Our team is fully committed to providing you the best possible solutions, products and support.

Reduce installation time and increase net operating income with our easy-to-install submetering systems, which feature license-free 900 MHz radio technology, 5+ or 10+ year battery life and the widest temperature range for maximum durability in every environment.

All Tehama Wireless MDTs and repeaters are available in MAX Range models, allowing RF signals to travel three-to-four times further than Standard Range devices, requiring fewer repeaters and reducing installation time.

Metering Data Transceivers (MDTs)

Choose from the industry's largest selection of automated MDTs, which monitor nearly all water, gas and electric meters and relay those readings to the DCAP. All are available in both Standard and MAX range versions.

Repeaters

Repeaters extend the range of the AMR network to provide coverage to large sites and challenging RF environments. Our popular Solar Repeater Kit includes a Repeater, solar panel, battery, charge controller, enclosure and pole mounting hardware.

Data Concentrating Access Points (DCAPs)

DCAPs manage the AMR network by capturing and storing data from all of the meters via the MDTs. Using an Internet or WiFi link, the DCAP automatically uploads all the meter reading data directly via email, FTP or an API.

Configuration Software

Our Configuration, Installation and Troubleshooting (CIT) software, companion web and mobile apps provide an easy-to-use interface to configure the DCAP and monitor each unit. They include built-in troubleshooting tools to help identify potential issues and ensure your system is performing optimally.

Why Tehama Wireless?

Next-gen Innovation

Tehama Wireless submetering products use 900 MHz radio technology and other industry-leading technical designs to cover a wide spectrum of requirements. They include solar-powered, submersible and MAX Range solutions.

Smarter Product Design

Fewer components with the simplest and the most cost effective installation help you reduce costs. Built-in software tools simplify troubleshooting and eliminate unnecessary and costly site visits.

Cutting-edge Customization

Our in-house engineering expertise supports customized, customer-driven products, along with the ability to create value-added features.

Premium Customer Support

We are committed to providing personalized customer support and keeping you and your team up-to-date with our innovative submetering products and solutions.

How Tehama Wireless Works

The complete solution

MAX Range MDT

Reads and transmits utility data up to 10 miles

MDT

Reads and transmits utility data up to 3500 ft

Billing Company

Meter Data is sent to billing company

CIT Software

PC App + Mobile App + Web App

Data

Internet

DCAP

Data Collection + Network Management

Repeater

Extends the range of the Automated Meter Reading network + transports remote MDT data to the DCAP

Multiple varieties of MDTs available

About Tehama Wireless

Tehama Wireless was founded in 2003 and our core engineering team has worked together for more than 30 years. With the industry's widest selection of wireless utility submetering products, all of which are made entirely in the United States, our product line continues to grow to meet the changing needs of our multifamily and commercial real estate customers.

Continually improving upon our motto "to keep it simple and human" we hold a deeply ingrained philosophy of smart product design and a commitment to providing the best possible support and training for our customers, distributors and partners. Today, Tehama products are in use across hundreds of thousands of residential units, campus facilities, manufactured homes and commercial and landscaping operations.
