

SRT DUCT CLEANING, LLC

Veteran Owned and Operated

Thank you for choosing or considering SRT Duct Cleaning for your dryer vent and duct cleaning needs. I hope this information will help you better understand duct cleaning and the process I take to clean your vents, make you breathe easier and help your furnace run more efficient. If you have any further questions, please call or text. I look forward to helping you and your family.

Sincerely,
Ryan Smith
Owner

What to expect...

A typical duct cleaning job (1200 sq ft) takes between 3-4 hours. A smaller house takes about 2-3 hours, while a larger home above 2,000 sq ft usually takes longer than 4 hours. My special duct cleaning process has three in depth steps to ensure your ducts get clean!

I start upstairs with the furthest vent away from your furnace and work my way down to the furnace. I take every vent off, vacuum all the dust and debris from the vent and beginning portion of the duct work. This process includes you return vents and ductwork which are the dirtiest of them all!

I then bring in "The Beast!" The Beast is a large (but portable) machine that acts like a toothbrush for your ductwork. The Beast has a powerful vacuum which attaches to a long hose that has a rotating brush on the end. The hose on The Beast works through your ductwork kicking and sucking up all the dust and debris. Once again, I start with that original vent furthest away from your furnace and work my way down.

Once the ductwork is free of debris, I will turn your house fan on, and I bring in the final machine. The final machine is called a fogger. The fogger sprays a light mist of anti-microbial, anti-bacterial solution, and sanitizes your ductwork. The fogger only goes in your return/supply vents and cycles throughout your ductwork, keeping it cleaner and healthier for longer. Don't worry, this is 100% safe for your family and pets.
