

Crop: Squash
Type: Club-Shape
Variety: 551 F1

Variety Description

Plant: strong compact plant with erect open growth. Low to medium branching. For plantation in low tunnel and in open field condition.

Fruits: club-shape with medium length 13-15 cm. Medium to dark green color with good uniformity in shape. LSL fruit that keep good color after harvesting.

Resistances: ZYMV, WMV, SLCV, PM.

Positioning & Features: strong plant suitable for multiple segment plantations. The variety keep good fruit color under cool and warm conditions.

Crop: Squash
Type: Anita Type
Variety: 555 F1

Variety Description

Plant: it has a strong, very productive plant with a semi-erect single stem and open habit allowing for easy picking. Maturity: 40 days after sowing.

Fruits: colour Pale Green/White and Perfect for stuffing.

Resistances: IR: ZYMV,WMV.

Positioning & Features: strong plant suitable for multiple segment plantations. The variety keep good fruit color under warm conditions.

Crop: Squash
Type: Greyzini
Variety: 557 F1

Variety Description

Plant: vigorous, healthy and rustic plant, high production stability throughout the cultivation cycle, even long.

Fruits: Greyzini, marketing with or without flower. Medium-long fruit, 18–20 cm.

Resistances: IR: Gc / Px / CMV / WMV / ZYMV.

Positioning & Features: particularly suitable for the summer cycle thanks to tolerance to thermal stress and genetic resistance.

Crop: Squash
Type: Greyzini
Variety: 558 F1

Variety Description

Plant: strong erect plant. Medium early variety.

Fruits: cylindrical with slight bulb with medium to dark green color. Medium long fruit 17-19 cm with high fruit uniformity.

Resistances: IR: ZYMV, WMV, PM.

Positioning & Features: for spring and fall plantation. High fruit quality.

Crop: Squash
Type: Cylindrical
Variety: 552 F1

Variety Description

Plant: medium early hybrid squash. Strong plant suitable for long season production. The Plant has an erect open growth habit. Short Internodes. Medium branching.

Fruits: cylindrical type with slight bulb, medium green color. Medium long fruit 17-20 cm with high uniformity. Medium flower attachment.

Resistances: field tolerance to viruses and PM due to plant vigor and strength.

Positioning & Features: for spring, summer and early fall plantation. Early continues production with good field adaptation. The variety keeps good fruit color during relativity hot conditions.

Crop: Squash
Type: Cylindrical
Variety: 553 F1

Variety Description

Plant: mid to strong plant with high covering and medium internodes with erect growth habit.

Fruits: cylindrical type, 17 – 20 cm, medium to dark green color, high uniformity, medium ribs, shiny fruit.

Resistances: IR: Powdery Mildew and Field tolerance to viruses

Positioning & Features: recommended for spring and early summer segment. Very attractive shiny fruit. Good flower attachment and high uniformity. Plant strength gives the variety excellent field tolerance to viruses.

Crop: Squash Hybrid
Type: Cylindrical
Variety: 554 F1

Variety Description

Plant: plant habit is quite strong with compact growth habit and high and regular yield.

Fruits: cylindrical, straight and long. Light green color and good shine.

Resistances: IR: WMV, ZYMV, Px

Positioning & Features: recommended for spring and summer, especially for open field, with good behavior under different growing conditions.

Crop: Squash Hybrid
Type: Cylindrical
Variety: 556 F1

Variety Description

Plant: very strong plant, a semi-erect single stem and an open habit allowing for easy picking, very productive with Maturity of 40 days.

Fruits: dark Pale Green/White Mottles.

Resistances: IR: ZYMV, WMV and PM.

Positioning & Features: recommended for spring and summer, for open field. It has the most attractive dark pale color, mottles and cylindrical shape.
