**Ballastwater Equipment Manufacturers' Association**  
**List of Verified Compliance Monitoring Devices (CMDs)**

---

**Purpose**

During the 9<sup>th</sup> session of IMO's Sub-Committee on Pollution Prevention and Response (PPR 9), it was agreed that it was beneficial to have a publicly available list of Compliance Monitoring Devices (CMDs) that have been verified in accordance with the "*Protocol for Verification of Ballast Water Compliance Monitoring Devices*".

In response to this need, BEMA offered to host this list of verified CMDs on our website. This is the location where this list will be permanently held. To be included on this list, manufacturers of CMD technologies that have been verified in accordance with the protocol may inform BEMA ([info@bwema.org](mailto:info@bwema.org)) and submit their certification as well as any testing data associated with the verification process. BEMA does not have any obligation to research verified technologies to be added to this list and all technologies wishing to be listed on this website must submit their data directly to BEMA for posting. BEMA does not promote, endorse, recommend or otherwise support any particular CMD technology.

**Currently Verified Technologies:**

At this time, the protocol is in the final stages of approval and there are currently no verified CMDs.
