WE SUCCEED AT HELPING DISTRIBUTORS ENHANCE THEIR PRODUCT LINES, WHILE MAINTAINING THE ABILITY TO PROVIDE CUSTOMERS WITH COMPETITIVELY PRICED, QUALITY SAFETY PRODUCTS.

### **WHY CHOOSE SEATTLE GLOVE:**

- CAREING AND KNOWLEDGABLE STAFF
- CUSTOM PRINTING AND BRANDING OPTIONS
- SPECIAL ORDER AND PACKAGING
- DEPENDABLE QUALITY
- TWO DISTRIBUTION LOCATIONS
- SAME DAY SHIPPING
- NO MINIMUM ORDER QUANTITIES

# Seattle Glove Inc.

For over 20 years, Seattle Glove Inc., has been building our brand of general safety products, servicing and preventing injuries to industries/manufacturers in North America. From individuals pruning their lawn to construction workers, line assemblers, food processors, sheet metal fabricators, automotive workers, oil and gas industry and welding technicians, our goal is to find the right safety product for your specific application. As we continue to grow and expand, our basic principles are still in practice today:

- Value:** *Conduct our business with integrity.* We consistently explore options to cut our operational costs while delivering to our customers – a total cost savings by offering a wide range of quality safety products.
- Convenience:** Through the proprietary one-stop shop model, we offer distributors convenience, cost-savings, efficiency and quality assurance.
- Service:** We are devoted to become a leader in gloves, protective garments, personal protection and safety equipment; our talented workforce is committed to superior service and knowledge, supported by exceptional resources, tools, and product knowledge.

As we continue to grow and expand our product line, we have added safety products that are more comfortable while minimizing risk of injuries. We are proud of our product expansion but also see a tremendous opportunity for future growth. We are a full line glove company (leather, cotton, PVC, latex, nitrile and vinyl disposable, Neoprene, cut protection and anti-fatigue gloves). With our expanding of protective garments (Tyvek, Fire Retardant Coveralls, Microporous, SMS and polypropylene), safety products (PVC boots, rubber boots, safety vests, rainwear and caution & danger tapes), We strive in becoming a “One-Stop” shop for our distributors.

We sell our product to safety equipment distributors and ship through two distribution centers (Mukilteo, Washington and Macedonia, Ohio). This enables us to service our customers by expediting deliveries.

Seattle Glove, Inc. is proud of the progress we have made in integrating new products that minimize injuries while enhancing productivity to a wide range of industries/manufacturers. We will continue our dedication in research and product development ensuring a safer environment for industries/manufacturer workers.

At Seattle Glove Inc., we take pride in our service and knowledge. Our staff will help you ascertain which of our broad range of products will best suit your needs.

Sincerely,

Thieu H. Tran  
President

# SOMETHINGS YOU SHOULD KNOW ABOUT LEATHER

## Confused about quality?

Seattle Glove offers many different leather types and styles. This includes different hems, thumbs, and stitching. This can lead to endless possibilities! To assist in your glove buying decisions, we strongly urge sample comparison and user field evaluations.

Our knowledgeable staff can assist you by phone or email so that you make the best decision for your protection needs!

## TYPES OF LEATHER:

**COWHIDE:** Most commonly used because of availability and durability

**PIG:** Economical price, dries soft

**GOAT:** High wear resistance comparatively, flexible

**DEER:** High flexibility and soft, dries soft

**ELK:** Soft and tough, dries soft

## CUTS OF LEATHER:

**GRAIN:** The outer smooth surface of the hide, provides a superior wear resistance compared to split leather.

**SPLIT:** The bottom surface of the hide, high tensile strength.

### Split is divided into:

**SIDE:** The best part of split leather, the back, also called butt leather.

**SHOULDER:** From the shoulder part of the split leather. More hairy than the side, this is the second best quality of split leather. Often sub-divided into the type of selection like select shoulder, regular shoulder, etc.

**BELLY:** From the sides of the hide, typical thinner and more fibrous. This is the most economical portion of the split leather.

# COMPLIANCE TESTING

## UNDERSTANDING CUT SCORES

Seattle Glove uses both EN 388 and ANSI 105 testing standards in regards to cut gloves. While compliance is not mandated in the United States, safety is our utmost priority and we want to make your safety choices easier!

### New Scale to Determine Cut Scores-ANSI

The new ANSI standard now features nine cut levels significantly reducing the gaps between each level and better defining protection levels for the cut resistant gloves and sleeves with the highest gram scores.

The graph on the next page shows the differences between the levels. New ANSI cut scores will feature an "A" in front of the score

### EN388 Methods and Scores

The EN 388, similar to ANSI/ISEA 105, is the European standard used to evaluate mechanical risks for hand protection. Gloves with a EN 388 rating are third party tested, and rated for abrasion, cut, tear, and puncture resistance.

Cut resistance is rated 1-5, while all other physical performance factors are rated 1-4. The new EN 388 2016 standard uses both the "Coup Test" and the "TDM-100 Test" to measure cut resistance for a more accurate score.

### The Bottom Line

The most important take away is CE and ANSI/ISEA cut levels are not equal. As a result of the test method differences, ANSI/ISEA cut level 5 materials can have a higher cut resistance than CE cut level 5 materials. The scale is difficult to understand, but easier when you look at cut levels in grams. This is something to be aware of when purchasing PPE. Many companies advertise cut level 5, but do not specify whether that is CE or ANSI/ISEA.

# ANSI VS EN388 STANDARDS

## ANSI TEST METHOD/ RATING SCALE

New ANSI testing scores now range from A1-A9

The sample is cut by a straight-edge blade, under load, that moves along a straight path. The sample is cut five times each at three different loads with a new blade for each cut and the data is used to determine the required load to cut through the sample at a specified reference difference. This is referred to as the cutting force, which is then equated to a cut level.

## EN388 TEST METHOD/ RATING SCALE

The Coup test determines a material's cut resistance rating through the counts of rotations needed for a circular blade, moving laterally, to cut through the material. The Coup test is not recommended for materials with high levels of cut resistance, because it can dull the blade, resulting in inaccurate testing. Instead, the ISO 13997 test can be used. This method is similar to the earlier referenced ASTM F1970 test that measures the amount of weight needed to cut through a material.

# A COMPLETE LINE OF CUT RESISTANT

LIKE NEVER SEEN BEFORE

Coating grip is key in preventing razor sharp objects from slipping and making contact with hands or arms. Seattle Glove offers a range of different styles, coatings, materials and liners to meet the needs of the job. We are always looking to provide the latest cut resistant technology to our customers.

# A PROVIDER OF INNOVATIVE SAFETY PRODUCTS

As a leader in hand protection, we continue to expand our traffic safety, face protection and winter product lines.

Seattle Glove started as a supplier of gloves, we have expanded to apparel, safety glasses, boots and more! We continue to grow with a vast array of consumable personal protective wear to meet our customers needs!

# RAINWEAR

**3001**

# DU PONT®

# CHOOSING A GARMENT

Before searching for an appropriate chemical protective garment, a detailed assessment of the nature of the hazard and the working environment is needed. There are different factors such as concentration, temperature, pressure and the work environment that should be matched to the garment's fabric, design and seam construction.

## Fabric

### DuPont™ Tychem®

Chemical barrier fabrics specifically engineered for protection over a range of hazards.

### DuPont™ Tyvek®

Made only by DuPont, it offers superior protection and durability. Tyvek® is 100% high-density polyethylene fibers entangled into a protective material with no fillers or thin films to wear away.

### Microporous Films

Bi-laminate with a thin microporous film layer on a spunbonded polypropylene nonwoven, these fabrics offer limited durability-barrier protection is lost when the film layer is abraded.

### SMS (Spunbonded-Meltblown-Spunbonded)

SMS fabrics rely on the meltblown polypropylene layer in the middle of the open tri-laminate polypropylene structure to act as the main filter for particles-limited durability and barrier performance.

## Seam Construction

### Serged or Sewn\*

A seam produced when multiple threads are interlocked around the raw edges of two pieces of material for a strong, stress-resistant seam.

### Bound\*

Tightly sewn with a reinforced outer binding to increase seam strength and barrier. For potential misting exposure of non-hazardous liquids or particle penetration through the seam.

### Taped

Both sewn and taped to provide strong chemical resistance against heavy liquid splashes and tough seam stress. A sewn seam is covered with a strip of compatible material by heat sealing.

### Double Taped

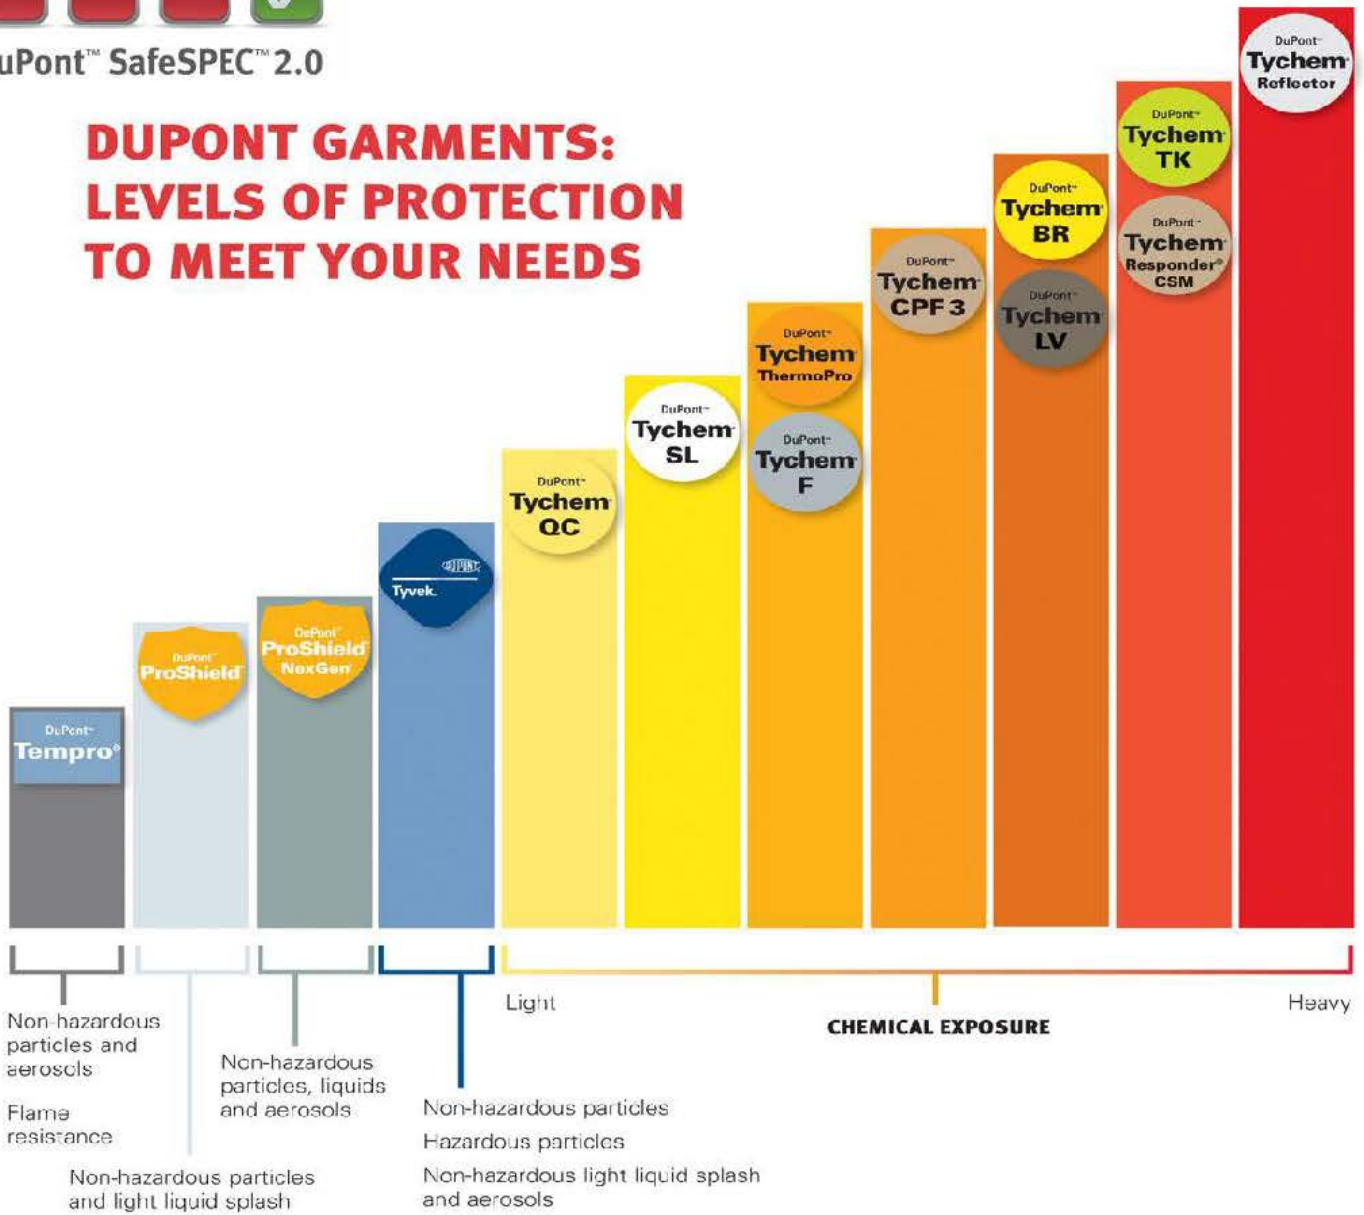

Sewn, then taped on the inside and outside of the seam for a very strong chemical- and-stress resistant seam.

\*Serged and/or bound seams are degraded by some hazardous liquid chemicals, such as strong acids, and should not be worn when these chemicals are present.

DuPont™ SafeSPEC™ 2.0

**Different jobs require various levels of protective clothing and Seattle Glove is proud to offer a wide variety of DuPont products to address those needs. We are one of a select few wholesalers for DuPont™, which allows us to provide competitive pricing to our distributors.**

European Directives 89/686/EEC Conception of Personal Protective Equipment (PPE)

PPE are classified in three categories related to the degree of risk they are designed to protect against. The procedure to prove compliance with the requirements of the Directive is specific for each category and is proportional with the risk.

## **CATEGORY I**

**Minor Risks**

PPE of simple design, where the designer assumes the user can himself assess the level of protection provided against minimal risks, the effects of which are gradual and can be safely and timely identified by the users.

## **CATEGORY II**

**Intermediate Risks**

Especially injury. The glove must comply with the one or more standards and is certified by a notified body as being compliant.

## **CATEGORY III**

**Irreversible Risks**

PPE of complex design intended to protect against mortal danger or against serious and irreversible health risks, which cannot be identified in sufficient time.

## **EN388**

Mechanical risks-this standard applies to gloves that protect against physical and mechanical hazards; it specifies requirements for abrasion resistance, perforation resistance, tear resistance and cutting resistance.

# GLOVE PATTERNS

## GUNN

## CLUTE

## REVERSIBLE

**GUNN-** Extends glove life keeping seams out of work area; available in continuous and wing thumb; made in leather palm and all leather.

**CLUTE-** Seams on back of glove reduce splitting' holds work area more tightly to palm; one piece palm; made in cotton and leather palm styles.

**REVERSIBLE-** Gunn pattern with thumb out of side; glove can be worn on either hand.

## CUFF STYLES

### KNIT WRIST

### BAND TOP

### SAFETY CUFF

### GAUNTLET

### SLIP ON

**KNIT WRIST-** Provides comfort and a snug fit.

**BAND TOP-** For easy removal and good circulation.

**SAFETY CUFF-** Side slit enables wearer to throw off the glove quickly.

**GAUNTLET-** Easy removal and hold tucked sleeve in glove.

**SLIP ON-** Easy removal.

## LEATHER PALM GLOVE FEATURES

### STRAIGHT THUMB

### WING THUMB

### KEYSTONE THUMB

**STRAIGHT THUMB-** Continuous full leather thumb; seam around the thumb.

**WING THUMB-** Thumb out to side; welts added to the seams for strength.

**KEYSTONE-** Thumb set-in as a separated piece, positioned naturally for maximum comfort; thumb seam is reinforced with extra stitching.

## Glove Chemical Resistance Guide (I)

**E**=Excellent; **G**=Good; **F**=Fair; **P**=Poor; **ND**=None detected; **ID**=Insufficient Data; **D**=Degradation; **BT**=Breakthrough, amount of elapsed time after initial exposure before the chemical can be analytically detected on the inside surface of the glove; **PR**=Permeation Rate is expressed in mg/m<sup>2</sup>/sec. PR can be used for estimating glove thickness required; for a given material, thicker is more resistant.

# TECHNICAL DATA

STYLE	DESCRIPTION	FEATURES	APPLICATIONS	CERT
OR200	Orange hi-vis impact glove, molded TPR fingers, synthetic leather, EVA foam palm, Velcro closure.	Synthetic leather palm, injection molded with Thermo Plastic Rubber (TPR), Ethylene Vinyl Acetate (EVA) padding in palm and back for impact resistance.	Construction, auto repair, demolition, manufacturing, mining fabrication. Landscaping, heavy construction and applications requiring protection from impact to the hands.	EN388: 3233
OR500	Orange hi-vis impact glove, molded TPR fingers, synthetic leather, EVA foam palm, slip on style.	IsoLiquid® breathable bonded membrane built the first layer of oil-free protection, 100% rubber composition padding provides the 2nd layer of oil permeating protection, TPR patch on fingers for impact protection and pinch injury prevention.	Oil/Gas drilling, extraction and refining, fracking, tool pushing, mining, demolition, heavy construction, cargo handling, and iron work.	EN388: 3233
GR2010	Green hi-vis impact glove, molded TPR fingers, synthetic leather, EVA foam palm, Velcro closure.	Synthetic leather palm, injection molded with Thermo Plastic Rubber (TPR), Ethylene Vinyl Acetate (EVA) padding in palm and back for impact resistance.	Construction, auto repair, demolition, manufacturing, mining fabrication. Landscaping, heavy construction and applications requiring protection from impact to the hands.	EN388: 3233
GR2012	Green hi-vis impact glove, molded TPR fingers, synthetic leather, EVA foam palm, slip on style.	Synthetic leather palm, injection molded with Thermo Plastic Rubber (TPR), Ethylene Vinyl Acetate (EVA) padding in palm and back for impact resistance.	Construction, auto repair, demolition, manufacturing, mining fabrication. Landscaping, heavy construction and applications requiring protection from impact to the hands.	EN388: 3233
GR500COR D	Green hi-vis impact glove, molded TPR fingers, corded cotton palm, EVA foam padded back.	Cotton corded palm designed for use in the oil and gas industries. Injection molded with Thermo Plastic Rubber (TPR) for back of hand protection.	Oil rigging, mechanical, mining, framing, automotive, electrical, HVAC, plumbing.	EN388: 3233 *Back of Hand only
TK5LP	TAEKI cut resistant, cut level 5, leather palm.	Excellent cut resistance, leather patch for high mechanical & heat protection glove.	Used for material handling, glass handling operations, fishing industries, sanitation, general maintenance, woodworking, waste handling and recycling.	EN388: 4542
V9870BT (Band Top) V9870KW (Knit Wrist)	Nitrile fully coated, jersey lined, safety cuff and available in a knit wrist.	Resistant to cuts, snags, punctures, abrasion, grease and oil.	Abrasive materials, automotive assembly, construction, sheet metal industries, rough castings, recycling and utilities.	EN388: 4211
V9875BT (Band Top) V9875KW (Knit Wrist)	Nitrile palm coated, jersey lined, safety cuff and available in knit wrist.	Resistant to cuts, snags, punctures, abrasion, grease and oil.	Abrasive materials, automotive assembly, construction, sheet metal industries, rough castings, recycling and utilities.	EN388: 4121
N3	HPPE, cut resistant glove, Black nitrile coated.	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, outstanding flexibility and dexterity due to the thin coating, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	EN388: 4543 ANSI: A3
PU372	HPPE soft fiber, polyurethane.	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, outstanding flexibility and dexterity due to the thin coating, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	EN388: 4342 ANSI: A2
HVNGOR5	Impact glove, cut resistant, Hi-Vis nitrile palm.	Synthetic leather palm, injection molded with Thermo Plastic Rubber (TPR), Ethylene Vinyl Acetate (EVA) padding in palm and back for impact resistance.	Construction, auto repair, demolition, manufacturing, mining fabrication. Landscaping, heavy construction and applications requiring protection from impact to the hands.	ANSI: A7
GR13GC5	HPPE ,Hi-Vis green ,TPR with sandy nitrile palm.	Synthetic leather palm, injection molded with Thermo Plastic Rubber (TPR), Ethylene Vinyl Acetate (EVA) padding in palm and back for impact resistance.	Construction, auto repair, demolition, manufacturing, mining fabrication. Landscaping, heavy construction and applications requiring protection from impact to the hands.	EN388: 4543 ANSI: A8

# TECHNICAL DATA

STYLE	DESCRIPTION	FEATURES	APPLICATIONS	CERT
<b>BPU4 (Black) GPU3 (Grey) WPU4 (White)</b>	13 Gauge nylon liner with PU coating.	Provides superior dexterity and sensitivity, breathable back for comfort.	Electronic, computer, automotive and small parts handling.	4131
<b>CRBN3</b>	HPPE, cut resistant glove, nitrile foam coating.	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	4543
<b>DYPU5</b>	Heavy weight knitted from 100% ultra high density polyethylene fiber on the palm.	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, outstanding flexibility and dexterity due to the thin coating, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	4444
<b>GBNC5</b>	Light weight Taeki liner, HCT black nitrile coated on palm and knuckles.	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	4543
<b>GDYP4(Grey) WDP3(White)</b>	Knitted from 100% ultra high-density polyethylene fiber and coated with polyurethane on the palm.	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, outstanding flexibility and dexterity due to the thin coating, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	4344
<b>NF300 (Grey/White) NF500BB (Black/Black)</b>	13 Gauge nylon liner with nitrile palm coating.	Provides the highest level of grip and soaks up the oil to ensure the hand won't slip in oily conditions.	Automotive, packaging inspection, component assembly and gardening.	4121
<b>NMF506 (Plain Palm) NMF608 (Micro-Dots)</b>	15 gauge grey nylon, black nitrile micro-foam, palm coated. Available with or without micro-dots on the palm.	Micro-Foam nitrile coatings are compatible with light oils and provide good grip and excellent abrasion resistance.	Automotive, packaging inspection, component assembly and gardening.	4131
<b>SCPU5</b>	Heavy weight steel wire with PU palm coating, extended cuff for extra protection.	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, outstanding flexibility and dexterity due to the thin coating, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	3541
<b>SPARTACUS</b>	HPPE, cut resistant knit glove, coated polyurethane palm.	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, outstanding flexibility and dexterity due to the thin coating, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	EN388: 4543 ANSI: A4
<b>LB3</b>	HPPE, Cut resistant glove, latex crinkle coated	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, outstanding flexibility and dexterity due to the thin coating, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	EN388: 4543 ANSI: A3
<b>HV</b>	HPPE Hi-Vis green foam nitrile glove.	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, Hi-Vis for extra visibility, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	EN388: 4544 ANSI: A4
<b>X5</b>	HPPE, cut resistant glove, polyurethane palm.	Resistance to abrasion and cuts, excellent comfort due to the seamless liner, touch screen capability, machine washable to 40°C.	Automotive, glass handling, recycling, sheet metal work, cutting applications, bottling and canning, delicate and precise operations.	EN388: 4544 ANSI: A6
