

Citrus Pruning

Tony Sarah Presentation

for Garden Club of PebbleCreek - January 2023

Tony Sarah begins trimming lemon tree.

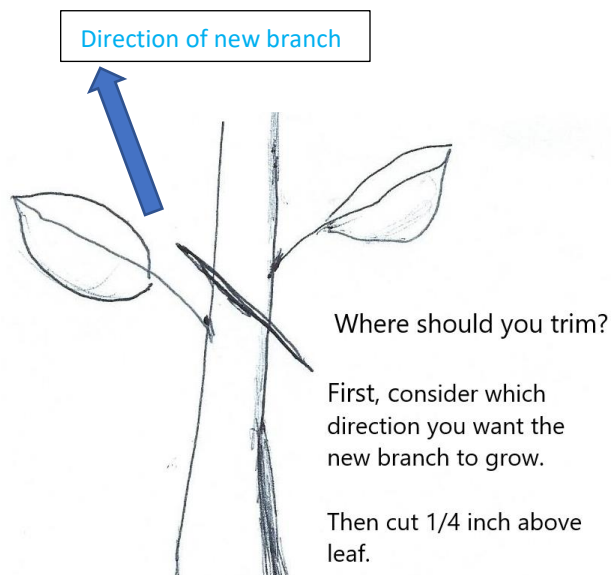

Example of a sprout within 1st foot of graft.

When To Prune: January February is the time to trim and/or prune citrus plants.

Pruning Tips:

- Clear growth first foot above the graft.
- Remove dead branches.
- Remove suckers from roots.
- Remove small growth that is growing downward, keeping “up” growth.
- Prune no more the 1/3 of the tree at a single pruning session.
- Less trimming is better; too much trimming removes photosynthesis and does not benefit the plant.

One third of lemon tree trimmed for this pruning session.

Recommended organic product for protection against sunburn, insects, rodents.

Tony Sarah's organic fertilizer formulas.
