Comments:

Date Spayed / Neutered:

Schedule Surgery Date: 4/7/2022

Stitches Removal/Wound Recheck Date:

Clinic Name: SCRAPS

Previously Spayed / Neutered: No

General Vet Notes: 3/28/22: P is BAR, active. Severely uncomfortable in hind end - matted fur and feces. P allowed brief exam of rectal area - P has what appears to be severe perianal fistulas with matting fur due to diarrhea a secondary issue with perianal fistulas. P would not allow us to give sanitary grooming will need to sedate to be able to evaluate fully and be able to groom/shave matted feces. P on a hold - starting antibiotics for infection around rectum. Ordering medication to start for perianal fistulas if not reclaimed. This condition is severe and needs vet treatments and routine follow up to help manage it. At this time starting antibiotics and if not reclaimed will sedate for neuter and shave and full evaluation of hind end. VTN required if reclaimed. - BOK

3/31/22: Atoptica arrived Rx 1 1/2 tab SID - this is a long term medication do not just stop. - BOK

4/7/22: Shaved abdomen rectum - severe irritation due to perianal fistulas. BOK

4/13/22: Neuter site swollen and irritated - rx Simplicef 200mg PO SID 14 days. - BOK

6/28/22: P has been on treatment for severe peri-anal fistulas, they have improved some but still not getting great improvement with all medical management. P is vocalizing when defecating, concerns for QOL for this dog as this is a chronic painful ailment that is a life long management, have not been successful in last months with getting fully under control, has improved but still in severe condition. Discussing QOL and options. - BOK

7/6/22: Discussed with another DVM about this dogs case, plan to do two week trial of steroids to see if that can make a difference for him.

Discontinue atopica start prednisone 2mg/kg dose SID for 2 weeks, then recheck. If no improvement, concerned that this is so severe and QOL is suffering, if improved/improving will see if can taper. Continue Rx diet. - BOK

7/14/22: Appears that P is doing well on 2mg/kg dose, diarrhea is improving. Plan to taper to slightly lower dose to see if diarrhea returns. - BOK

9/19/22: P been vomiting more last several days. On evaluation Large abdominal mass palpated, attitude ADR, slight weight loss, muscle loss. Rectal perianal fistulas improved/resolved but still having some soft stools. Due to abdominal mass (dfdx: neoplastic, abdominal, colon, etc.) and decline clinically, Humane euthanasia recommended and performed. - BOK
