# Akron's Perspective: Reservoir Management for HAB Mitigation (and other stuff)

# Potentially Harmful Algal Bloom

*Reservoir*

Coming to a ~~Theatre~~ near You!!!

# Akron Water Supply

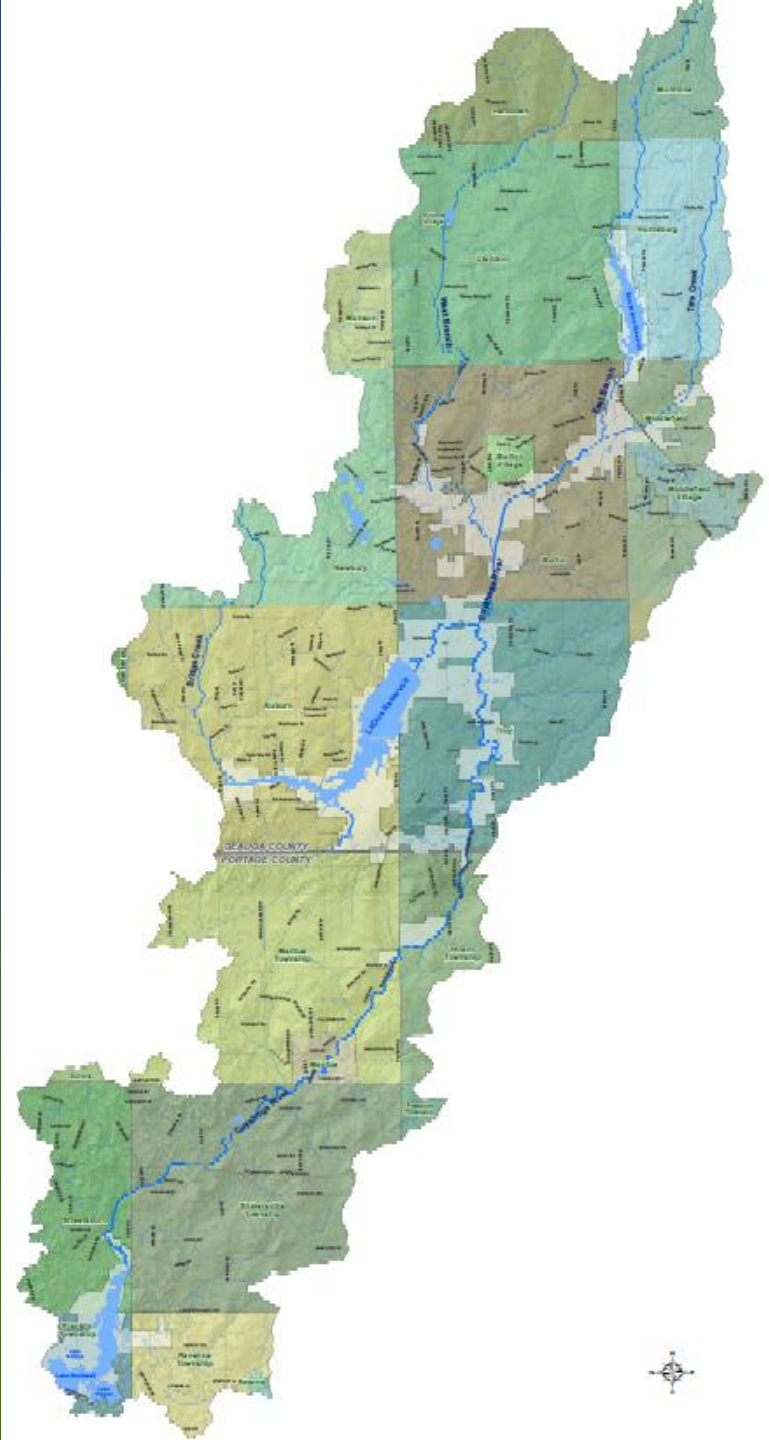

- 35 MGD average
- Conventional Filtration Plant
- Provides water to about 300,000 people
- Located in Kent, Ohio

# Akron Watershed Division

## FUN FACTS:

- UCRW 207 miles (134,463 acres)
- 3 Reservoirs: East Branch, LaDue and Rockwell.
- Akron owns 12% of the UCRW (15,941 acres), including 36.3 miles (31%) of river frontage
- 47,542 acres Ag in UCRW (32.5%)
- 74 NPDES Permitted WWTP discharges
- 7 employees

# Lake Rockwell Reservoir

- Impounds Upper Cuyahoga River
- 770 acres surface area
- 207 square mile watershed
- Cost for treatment plant and Reservoir: \$815,000 in 1913

# East Branch Reservoir

- Impounds East Branch Cuyahoga River
- 1.35 BG, 1938
- Cost: \$658,000, PWA grant : \$268,000

# Wendell R. LaDue Reservoir

- Impounds Bridge Creek and Black Brook (tribs of Cuyahoga)
  - 1,550 surface acres - Completed in 1962
  - 6.1 BG

## *Mom's Famous Algal Bloom Recipe*

- *1 water body (preferably eutrophic and/or with high detention time)*
- *2-3 days sunshine*
- *1 pinch nitrogen (optional)*
- *Phosphorus to taste*

*Mix slowly and bake at 20-30\* C (68-86\* F)  
until full bloom*

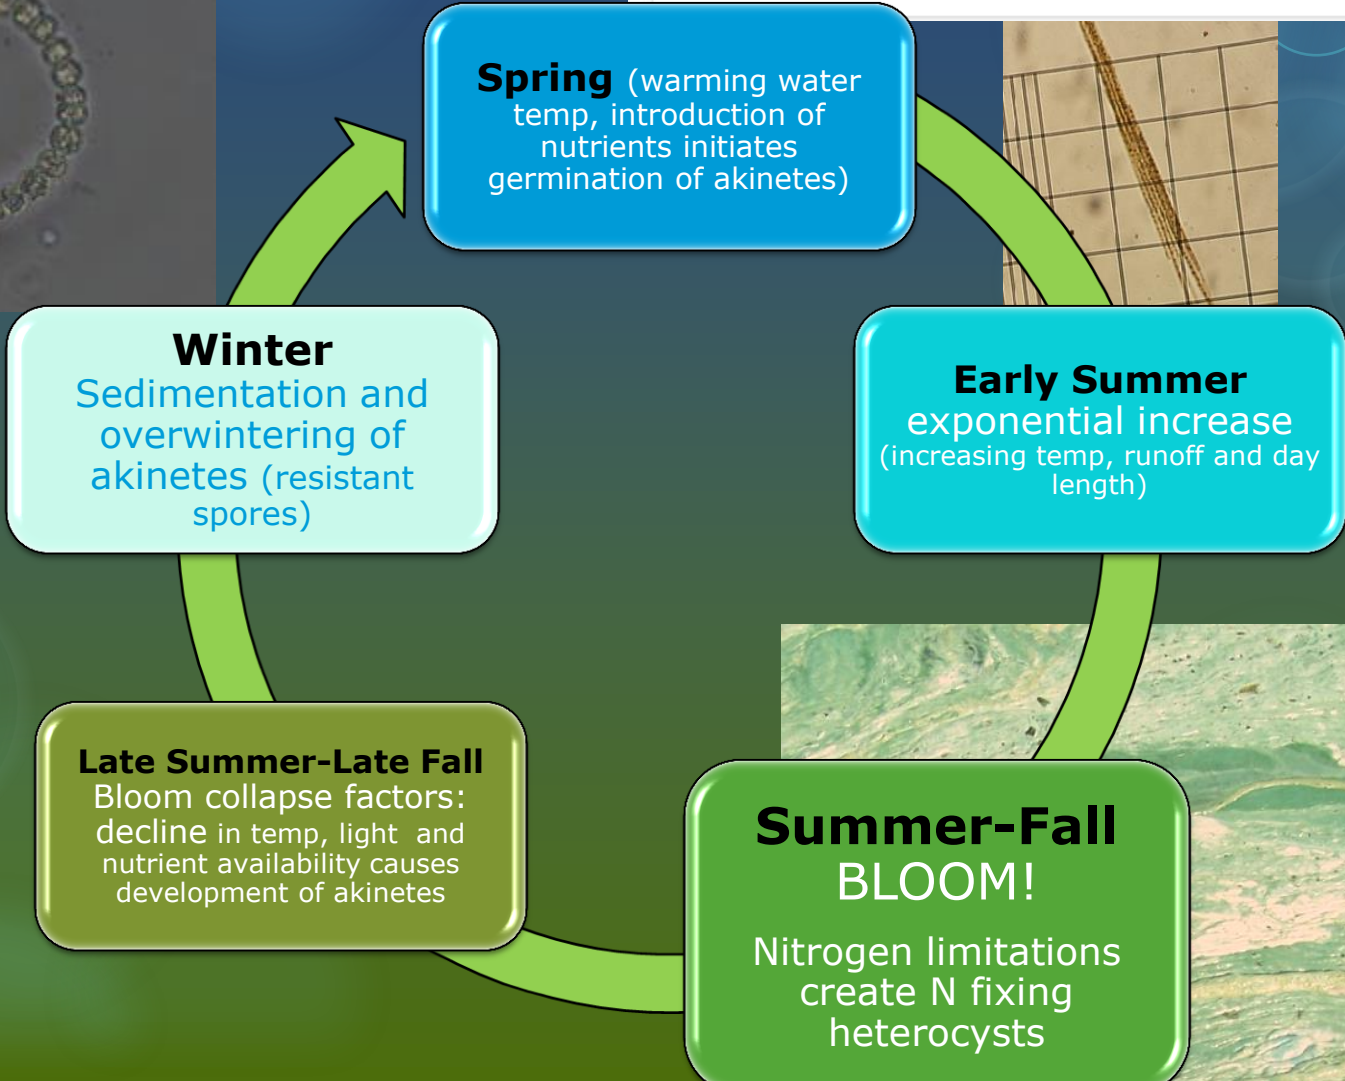

# Cyano fun facts!

The oldest known fossils, in fact, are cyanobacteria from Archaean rocks of western Australia, dated **3.5 billion years** old. This may be somewhat surprising, since the oldest rocks are only a little older: 3.8 billion years old!

### Fossil Record of the Cyanobacteria

[www.ucmp.berkeley.edu/...](http://www.ucmp.berkeley.edu/) University of California Museum of Paleontology ▾

**Winter**  
Sedimentation and overwintering of akinetes (resistant spores)

**Spring** (warming water temp, introduction of nutrients initiates germination of akinetes)

**Early Summer**  
exponential increase (increasing temp, runoff and day length)

**Summer-Fall BLOOM!**  
Nitrogen limitations create N fixing heterocysts

**Late Summer-Late Fall**  
Bloom collapse factors: decline in temp, light and nutrient availability causes development of akinetes

# No Nitrogen, No Problem

*Anabaena* --a cyanobacterium w/ division of labor

# LaDue's Watershed Programs

1930's City of Akron Timber Operation

## 769 Acres Of Water

There are reasons for these things, according to W. R. LaDue, water department superintendent.

The vineyard and orchard exist because the city must own the land surrounding the reservoir to safeguard the water supply, and yet they afford a source of revenue from the land.

The pine trees represent the first of many far-reaching steps to provide pure, colorless and odorless water for the city system.

"When evergreen needles fall they

prevent weed growth, keep back soil erosion and preserve the moisture in the banks instead of dissipating it," explains Mr. LaDue.

Copper sulphate is used to control weed-growth in the reservoir, which has a surface of 769 square acres. The flow line is 1052 feet above sea level and 480 feet above Lake Erie.

The water begins its journey through the purification plant and pumping station a heavy metal screen adjoining the 280 feet dam.

Raw water from the dam flows by gravity through a 48-inch cast iron pipe a half mile to the purification plant. When the demand

## Shores Of Lake Rockwell And Troy Reservoir Made To Blossom Like Rose By Modest City Water Chief

Weeds, Underbrush Give Way to Modern Orchard, Nursery

### MAKE A PARADISE

Beautiful in Blossom, Trees to Give Bountiful Yield

By EVAN WILLIAMS, JR.

IMMACULATE, quiet-spoken Manning Perlee Tucker, superintendent of the Akron waterworks, was raised on a farm near Cincinnati.

His current ambition is to retire to some broad, rolling acreage and live the life of a gentleman farmer.

That, perhaps, explains the agricultural activities at Lake Rockwell and Troy Reservoir.

The shores of Lake Rockwell, once overrun with weeds and underbrush, have been transformed into a modern orchard and nursery.

Thousands of apple, pear and cherry trees make a paradise of blossoms in the spring, and bear their fruit in the summer and fall.

Forty acres of swollen, purple grapes are gathered in the fall. "The finest grapes you ever tasted," boasts Superintendent Tucker.

500,000 Pine Trees

Cattle and Sheep Keep Land Clear; to Yield Profit

### FINE HEREFORDS

Farms Will Furnish Potatoes to Feed Akron's Needy

have not sprouted yet. Almost perfectly matched, their red bodies, white faces and chests just miss being shaggy. Short of leg they are and heavy of body.

So equal are they in size, one could line up a dozen of them and span them with a board, being almost unable to put one's hand between the board and the back of any steer.

Cattle experts at Wooster advised the purchase of Hereford steers. They have little or no reputation as dairy cattle, but are a hardy breed and produce an extremely fine grade of beef. Docile and curious, they will even now approach within a few feet of a man, and will be entirely tame in a short time. Being docile they fatten easily and readily.

#### Fine Beef Breed

As evidence that they are a fine beef breed, the Hereford is now the most numerous ranch animal in the United States and Canada.

By Christmas the beef will be prime for the market and with any kind of a price at all will bring in between \$10,000 and \$15,000, leaving sufficient cattle for breeding.

Long Process; 20 Tons  
Of Coal Are Used  
Daily**

result from algae growth. Then, just before the filtration process 1000 pounds of calcium oxide, or quick lime, is mixed into the water to soften it and take out the carbon dioxide.

This is a process that vitally affects the pocketbook of every city water user, for it removes the corrosive action, which in some cities
