

# 550 Spent Primer Chute™

## For the Dillon RL 550 Press

**You'll NEVER Need to Empty the Spent Primer Cup Again!**

- Replaces the Spent Primer Cup on the Dillon RL 550 reloading press.
- Encloses the Spent Primer Catcher Chute ... so primers won't bounce out and onto the floor!
- Spent primers are routed through clear tubing into any convenient waste container.

Included: — Spent Primer Chute™ for RL 550 Press  
— 3 feet of Clear 1/2" PVC Tubing  
— Installation Instructions

Patent Pending

Manufactured Exclusively for UniqueTek by: Bob Hahin "Original Bob Sled"

### Installation Instructions:

Refer to the Schematic and Parts List in your Dillon RL 550 Instruction Manual for part numbers and their locations on the press.

1. Press one end of Clear PVC Tubing onto bottom of the BobChute™.  
Note: Warming the tubing slightly with a hair dryer can make installation easier, as well as removing any kinks in the tubing.
2. Raise the press Platform (i.e., lower the operating handle all the way).
3. Lift the Spent Primer Cup (part #13650) off the Right Link Arm (part #13747).
4. Place the BobChute™ onto the Right Link Arm.
5. Route the Clear PVC Tubing to a container suitable for collecting the spent primers. The tubing should be routed so that it follows a continuous downward angle, ensuring spent primers will fall easily through the entire length of tubing and not clog. The tubing can be cut to length as needed.
