

# REDUCE COSTS & DRIVE VALUE WITH

## Our audit services can identify:

- unused services through usage & button reports
- billing errors & overages by scrubbing carrier records
- potential optimization for forked, inter-region and inter-state circuits
- opportunities to share circuits internally by comparing carrier inventory, city pairs and costs with internal inventory
- opportunities to utilize internal network to eliminate the need for international circuits with high MRCs

## How it works:

- Intro call to review details, current database & obtain Letter of Agency (LOA) for vendors
- We work on your behalf with carriers, system vendors and users (if applicable) to confirm usage and reconcile billing
- We make recommendations on costs savings and, on your approval, coordinate all reconciliations and disconnects with the carrier and system vendors

End result: Clean system, reduced costs & updated database!
