SafePassage Virtual Attendant

This service provides visitor access control via remote attendants for a fraction of the cost of an onsite guard.

Using advanced next-generation technology, our remote attendants can see live traffic and can converse with visitors as they come through the access point. Authorization is then provided easily using our SafePassage access control software. With License Plate Recognition hardware installed at the access point, **SafePassage LPR** captures tag information and will open the barrier gate for authorized visitors. All visitor information is tracked and stored for easy future retrieval if needed.

SafePassage Residential and **SafePassage Voice** can be used in conjunction with **SafePassage Virtual Attendant** to provide the full access control experience. When visitors are not authorized by **SafePassage LPR** or **SafePassage Virtual Attendant**, residential users are optionally able to authorize visitors via **SafePassage Residential** or **SafePassage Voice**.

SafePassage Virtual Attendant Includes:

- ✓ SafePassage Virtual Attendant
- ✓ SafePassage LPR
- ✓ SafePassage Residential
- ✓ SafePassage Voice
- ✓ SafePassageMobile

SafePassage Onsite Attendant

SafePassage Onsite Attendant is next generation software intended for onsite attendants. Onsite attendants can use the SafePassage Suite to manage access at any access point. Allows onsite attendants the tools to track, store and control visitor access control information at commercial and residential sites. The system also allows onsite attendants the ability to print custom visitor passes and will send mobile notifications to users upon visitor arrival.

SafePassage Onsite Attendant Includes:

- ✓ SafePassage Onsite Attendant
- ✓ SafePassage Residential
- ✓ SafePassageMobile

SafePassage Residential

This option allows the residents the ability to authorize visitors. Residents will have the ability to authorize visitors using the **SafePassageMobile** app or through **SafePassage Voice**. **SafePassageMobile** can be used to update residential visitor information and will also send notifications to mobile users when visitors have arrived.

SafePassage Residential Includes:

- ✓ SafePassage Residential
- ✓ SafePassage Voice
- ✓ SafePassageMobile

SafePassage LPR

SafePassage LPR technology is installed at the access point and is used to capture tag information for authorization. **SafePassage Residential** and **SafePassage Voice** can be used in conjunction with **SafePassage LPR** to provide the full access control experience. When visitors are not authorized by **SafePassage LPR**, residential users are able to authorize visitors via **SafePassage Residential** or **SafePassage Voice**.

SafePassage LPR Includes:

- ✓ SafePassage LPR
- ✓ SafePassage Residential
- ✓ SafePassage Voice
- ✓ SafePassage Onsite Attendant
- ✓ SafePassageMobile
