

STREET'S®

STREET'S®

1. **GELATONE** Fabric Finish is necessary for certain fabrics to restore their original crispness and freshness. GELATONE Fabric Finish is a water-soluble fabric finish for professional application to drycleaned, wetcleaned and laundered fabrics. It is particularly effective in restoring the original look-and-feel to hard-to-finish fabrics such as wool, cotton, linen, ramie, silk and rayon. GELATONE provides superb finishing results on wetcleaned suits and other tailored items that will set you apart from the competition.
2. **PICRIN**'s quick-cutting solvent action, controlled rate of evaporation, and complete volatility, coupled with its safety to fabric and dye, make it the ideal choice for dry-side and touch up spotting. Use PICRIN to help remove heavy oily dry-side stains, including adhesives, asphalt, crayon, grease, inks, lipstick, mascara, nail polish, oil, paint, shoe polish, tar and varnish. PICRIN is safe to most fabrics and colors. If colorfastness is questionable, test garment in a hidden area.
3. **REVIVE**, Set yourself apart from the competition by delivering a difference that consumers will notice and appreciate. Using REVIVE in your hydrocarbon or perchloroethylene process will noticeably improve the look and feel of all garments.
4. **PYRATEX** is the preferred oily-type dry-side stain remover that can be used with any drycleaning process. Its unique solvent, detergent and pigment soil suspension properties allow PYRATEX to remove even the heaviest oily dry-side stains, including: heavy oil & grease, nail polish, oil-based paints, correction fluid, shoe polish, mascara, crayon, lipstick, ink, tar, varnish and lacquer. PYRATEX, which does not contain moisture, prevents stains like cosmetics, shoe polish, and others that contain dye from spreading and becoming more difficult to remove. PYRATEX is safe to most fabrics and colors. If colorfastness is questionable, test garment in a hidden area.
5. **PYRATEX LV**, Formulated to take on heavy-duty stains, PYRATEX LV can handle paint, oil, and grease stains (POGs), and even lipstick and cosmetics. Not only is it effective on a wide range of dry-side stains, but requires no flushing before cleaning in perchloroethylene (perc), high flash hydrocarbon (HFHC), traditional petroleum, wetcleaning or laundry systems. For post-spotting or when used in other systems such as GreenEarth® (D5), it can be flushed with steam, water, or other flushing agents.
6. **SOFSPOT** is a safe and effective stain remover for water-soluble stains such as foods, beverages and perspiration from delicate fabrics, including: silk, rayon, wool, linen, and cotton. SOFSPOT protects garments from the damaging effects of moisture remaining in fabrics after wet-side spotting. It is specifically formulated to minimize the problems associated with wet-side stain removal. SOFSPOT is safe to most fabrics and colors. If colorfastness is questionable, test garment in a hidden area.

7. **StreePRO's** formula safely and efficiently removes protein stains. Stains in this group often require alkaline action for complete removal. However, certain sensitive dyes may be damaged by products with unknown alkalinity. StreePRO is specially formulated to remove frequently encountered stains like food, milk, blood, perspiration, baby formula and urine. Choose StreePRO for safe, fast and effective removal of protein stains. StreePRO is safe to most fabrics and colors. If colorfastness is questionable, test garment in a hidden area.
8. **StreeTAN's** acidified formula safely and efficiently removes beverage and tannin stains. Stains in this group seldom respond to a neutral spotter and often require acidic action for complete removal. However, certain sensitive dyes may be damaged by products with unknown acidity. When using StreeTAN, you can be assured of safe removal of tannin stains. StreeTAN is safest for coffee, beer, grass, liquor, mustard, soft drinks, tea, wine and other tannin stains. Choose StreeTAN for safe, fast and effective removal of tannin stains.
9. **Streetex** Pre-spotting is the best prevention against recleans. Use STREETEX at the spotting board for removal of water-soluble stains: necklines, hemlines, underarms, pockets, cuffs and areas of general soiling. It penetrates and loosens most water-soluble stains quickly and effectively when sprayed over general areas where soil can normally be expected in addition to visible stains elsewhere; then stains can be flushed from fabric in the drycleaning process. STREETEX is safe to most fabrics and colors. If colorfastness is questionable, test garment in a hidden area.
10. **WetDry** combines dry-side and wet-side stain removal agents all in one pre-mixed, low-odor product. It effectively removes a wide array of combination stains and flushes easily with water or steam. Use WetDry to remove difficult combination dry-side & wet-side stains, including: latex & unknown, paint stains, gravy, sauces & soups, light oils, light greases, cosmetics, inks, oil-based paints, unknown stains, and embedded soils on collars, cuffs, hemlines & drape, and linings. WetDry is safe to most fabrics and colors. If colorfastness is questionable, test garment in a hidden area.

**** R.R. Street & Co. Inc., also known as “Street’s,” was founded in 1876 and is a leader in the manufacturing and marketing of cleaning process additives, stain removal agents and filtration products in North America, and a strong presence internationally as we continue to establish trusted partnerships with distributors, worldwide. ****
