

STOPBITE™ COLLARS FOR A MORE COMFORTABLE PET!

We invite you to say "Farewell to Elizabethan Collars and those tricky Buckets". Stopbite™ Collars are a great alternative for your customers pet's after surgery. The innovative Stopbite™ Collar is an effective more comfortable option.

Stopbite™ Collars have been designed in the USA in consultation with vets and have proven to be extremely successful in preventing dogs and cats from biting or licking wounds, bandages, stitches, hot spots, ears and staples, whilst preserving a natural sleep and eating position.

Stopbite™ Collars allow dogs and cats to maintain complete peripheral vision, so they are calmer, happier pets.

Stopbite™ Collars are made of rigid plastic and foam, which is designed to breathe, with perforations that allow the animal to stay cool (less sweating) and more comfortable by allowing air to circulate through the collar, with less chance for bacteria to grow. They are made of a soft 95% nylon and 5% cotton cloth with polyethylene plastic and sparkle, which will absorb any sweat.

The unique contoured neck allows the pet to have greater up and down mobility, without compromising the healing. The safety harness also helps to prevent the animal from removing the collar.

Stopbite™ Collars have a combination velcro closure and buckle, which is easy to put on. Safety reflectors and an easy-access hook assist during night walks. The buckle removes the fuss of hooking leashes onto pet's tags.

- Ventilated
- Contoured Neck Design
- Velcro Straps & Buckles
- Safety Reflectors
- Hook for Leash
- Soft, Durable Materials
- Machine Washable
