What is the Willys Chrome finish , and how durable is it?

The Willys Chrome finish consists of a layer of pure silver metal; sandwiched between two layer's of paint. The topcoat layer is a very durable automotive clear coat that can be tinted to any reflective color you desire. Our 3-layer "spray-on" chrome finishes has amazing reflectivity, Willys Chrome has proven durability even in the harshest environments. Look for it on college football helmets, and automotive OEM paint , and will hold up just like the paint on your car.

What materials and substrates will it work on?

WILLYS CHROME CAN BE APPLIED ON VIRTUALLY ANY SURFACE - WOOD ,METAL ,PLASTIC, GLASS,CERAMIC, VINYL, AND MORE! IF YOU CAN PAINT IT, YOU CAN CHROME IT WITH WILLYS CHROME.

What are the advantages of using Willys Chrome?

The Willys Chrome finish is environmentally friendly- it uses silver metal instead of toxic hexavalent chromium, a know carcinogen used in traditional tank painting. There is no other product of this type that looks just like chrome, but remains flexible on bendable plastic, vinyl ,and leather! Our finish has been independabently test in an accelerated weather chamber; simulating extreme heat, humidity and high UV exposure. Willy's chrome has proven durability in the harshest environments guaranteed to never peel, flake, or yellow in the sun.

One big advantage is the turnaround time is in days not months!
