

## July 2021 Monthly Contest Topic

Bridge or Trestle – with or without a Train

## Virtual Voting Instructions

Page through all the entries and return one preferred photo number for each of the two categories – model and prototype. Email your two numbers to [webmaster@cincy-div7.org](mailto:webmaster@cincy-div7.org) by the end of the day before our meeting. The results will be shared at our meeting.

## Exhibition Photos

**HO scale model of the Ida Street Bridge in Mt. Adams (Cincinnati, Ohio). This 1931 poured concrete Art Deco masterpiece replaced a wooden trestle used exclusively by the Route 49-Eden Park streetcar line of the Cinti Street Ry. The new bridge carried auto traffic and 2 streetcar tracks. The model is almost 6' long and is built to scale length and height. It is scratch-built using rigid foam plastic except for modified Rix Products Early Railings. Each arch duplicates the parabolic shape of the prototype, with each at 10 inches high with an 18 inch span. Mark Albert**

**Double deck highway/BNSF swing bridge over the Mississippi River at Fort Madison, Iowa. Jim Rollwage**
