

NeuroSwift Pro+ System

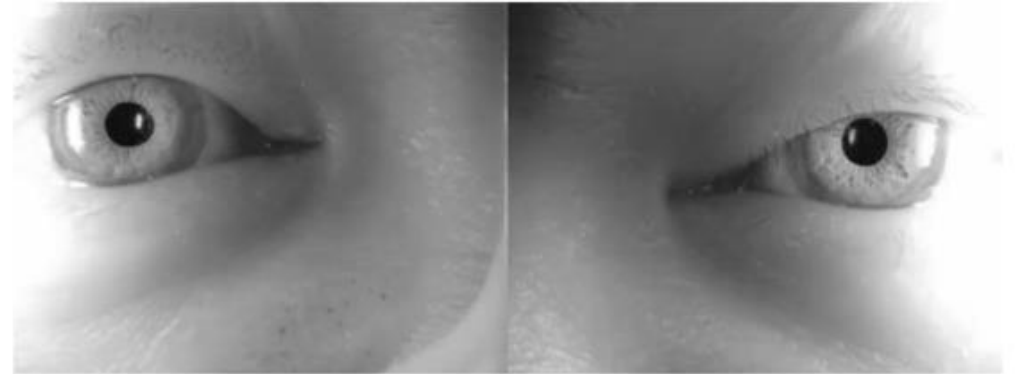

NeuroSwift Pro+ captures the whole eye-motion which include torsional, horizontal, vertical and pupillometry measurement for a clinical neurological evaluation. With full 3D visual stimulus and freedom motion sensors, the conditions of patients are easier to be quantified. Multiple vestibular and neurotologic evaluation are integrated into this system which provide comprehensive decision support for professionals.

- Portable** — lightweight enough to carry with relative ease
- Effective** — decision support outcome for physicians
- Accessible** — available for any laptop & notebook
- Comprehensive** — Standardized and guideline-based features, tests and risk analysis

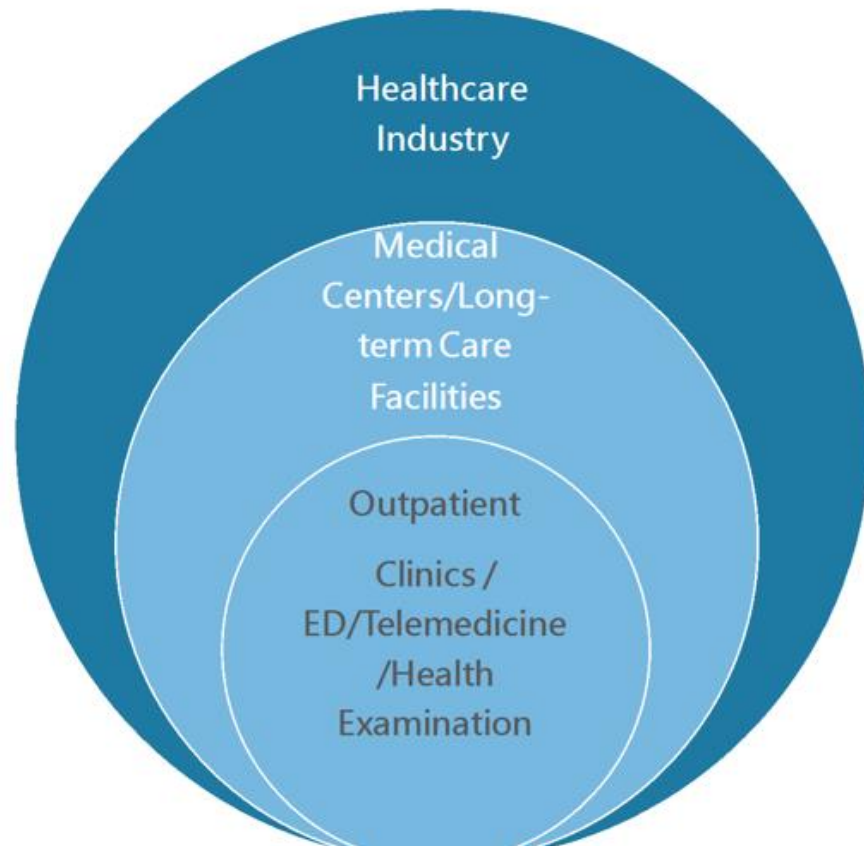

Core Value

Neurobit is a pioneer in micro-eye movement analysis. With the aim of providing revolutionary technology to the medical community, Neurobit integrated both hardware and software system which leverages artificial intelligence and machine learning for improved diagnostic precision.

Building an Ecosystem

NeuroSwift Pro+ System

- Brings **value** to all major stakeholders: government, providers, insurance, physicians, and patients
- Enhance **appropriate use** of neuroimaging
- Save **time** and **costs** while achieving **diagnostic accuracy**
- Beneficial for guiding **treatment plans**, and managing **patient expectations**

NeuroSwift® and NeuroSwift® Pro

NeuroSwift®

- Video Frenzel
- Video Playback
- Basic Eye Tracking
- Basic Pupil Tracking
- Pupil-size Measurement

- Ocular Motility Control
 - 9 Gaze Test
 - Cover Uncover Test (CUT)
 - Alternated Cover Test (ACT)

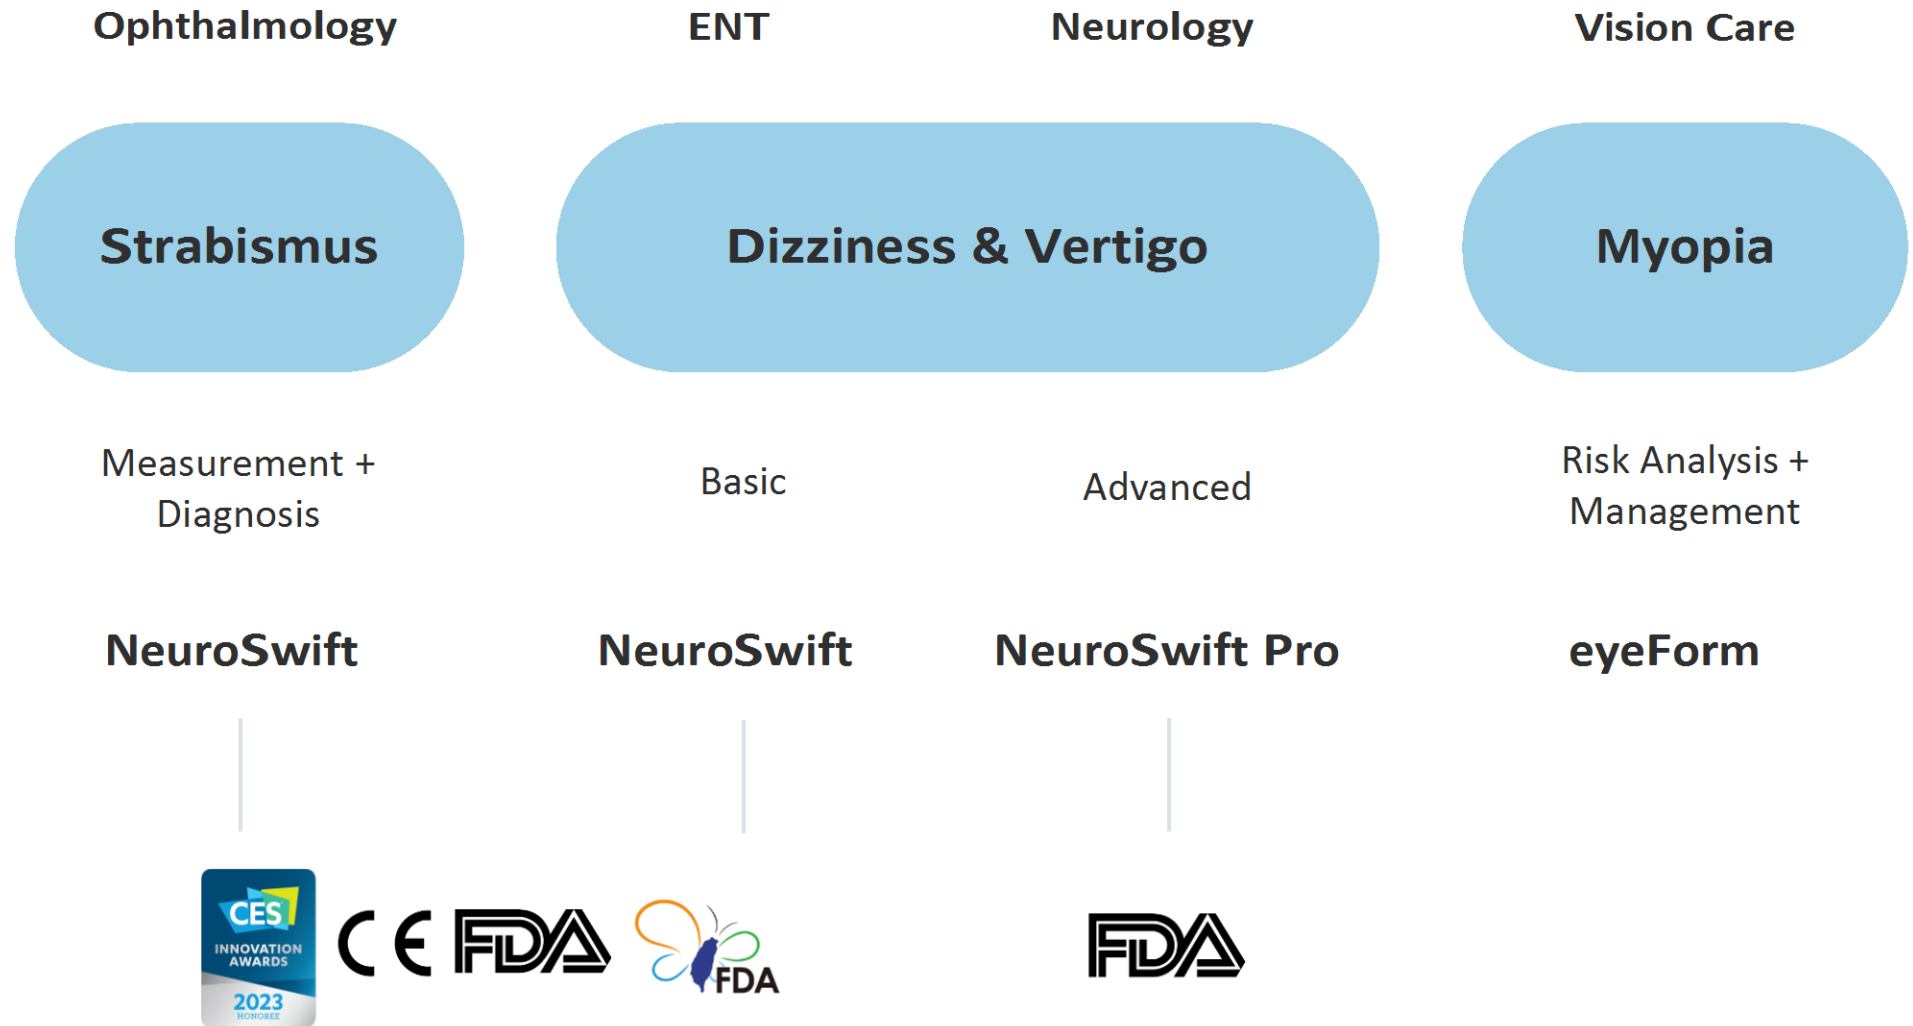

NeuroSwift® Pro

- Video Frenzel
- Video Playback
- Advance Eye tracking
- Advance Pupil Tracking
- Nystagmus Tests
- Oculomotor Test Battery

- Cutting-edge reflective imaging technology
- Lightweight, single cable design for easy mobility
- Rigid and adjustable headband for slip-free testing sessions
- Effortlessly removable, magnetic eye cover
- Instant video playback capability
- Swift data analysis system
