

The standard cross (above) and H -style (below) traps.

There are two styles of traps: cross style and H -style. Both use the same sized components. Masts measure about $32^{\prime \prime} \times 1$ " x 3/4". Arms measure about 26 " x $3 / 4^{\prime \prime} \times 3 / 4^{\prime \prime}$. Flags are $3.5^{\prime \prime} \times 4.25$ " and stand ~36" above the ice. The 4" aluminum reels hold over 600' of unwaxed 30lb Dacron. One color of reflective tape for the mast and reel is included. The mast and arms are made from oak. A blaze orange or blaze red vinyl flag is included.

All traps use stainless steel nuts, bolts, and washers. The reel drag nylon-lock wing nut is zinc plated. Reels are made using aluminum, a brass threaded rod, and brass nuts. The drag uses nylon washers and stainless-steel spring washers. Nylon spacers are used on the reel axle. The H-style traps use nylon spacers between the mast and arms. Flag wires, flag brackets, trip tubes, trip wires, tube clips and wood screws are stainless. The flag spring is zinc plated.

Various upgrades are available: different woods, more than one color of reflective tape, heavy duty vinyl flags, flags with reflective material, and stainless-steel flag springs, as well as custom branding.
