

# Snug 'N Secure

The natural  
back-to-side sleeper

The American Academy of Pediatrics (AAP) has recommended the side or back as the proper sleeping position for infants to help prevent SIDS. As a result, there has been a dramatic increase in the number of infants with flattened heads or positional molding, a condition that occurs when an infant is placed in the same position, especially the back, each time they are put down.

Doctors now recommend alternating a baby's sleep position from side to back to side, however, the side sleeping position is the least stable position. Parents need to insure that a baby doesn't roll to its stomach during a nap. Snug 'N Secure safely supports baby in all recommended positions and gives parents peace of mind while their baby is sleeping or napping.

## Pin Lock

Side to ...

... back to ...

... side.

Base easily adjusts and locks to support baby on both its side and its back while preventing the baby from rolling to its stomach.

- Snugly and securely supports baby on its back AND either of its sides.
- Allows easy alternation of sleep position.
- Portable, baby sleeps or naps wherever Mom or Dad goes.
