DryH₂O

Emergency Dehumidification and Drying

941-473-7453

How May We Assist You?

Dear Prospective Customer;

It is inevitable that sooner or later, you or one of your clients will encounter a Loss that will require structural drying, fire restoration, some form of mold remediation or microbial clean up.

Imagine a company with the intent on saving you and your clients time and money by minimizing damage and loss to your property and it's contents.

DryH2O has a successful history of developing winning partnerships with people like you that will be beneficial to all involved.

Our 24-hour Emergency Response Team of certified and dedicated professionals will reassure you and your clients of the level of service that will be committed.

Together we can solidify and strengthen the relationships with you and your existing clients and provide a powerful marketing tool, needed in today's competitive market, to attract new and larger ones.

Regards

McKinley Henson

Mission Statement

The focus of **DryH₂O** through its integrated organization, is to provide a superior quality service through state of the art technology, years of experience, and a solid team of management.

Serving all of the United States, **DryH₂O** provides a full range of innovative structural drying and related services while maintaining the highest level of customer service, professionalism, and guaranteed results.

Once a water damage has occurred, the destructive elements of moisture are set into motion.

Without proper attention, carpet will delaminate and stain. Wood floors, tiles, subfloors, walls and cabinets will buckle and warp. Mold and mildew will develop within 72 hours in a warm, humid environment. Our professional experts can save mental anguish, as well as many thousands of dollars if engaged in the early phase of damage. Expensive floors, furnishings, and insulated walls can be dried without interruptive replacement or fear of malodor.

Rapid drying that stresses proper management of temperature, airflow, and dehumidification is essential in restoration of a water damaged structure. State of the art dehumidification equipment, managed by professionals who understand psychometrics, will limit losses from moisture damage and return your property to its pre-loss condition.
