Keeping animals drinking, eating & producing.™

Calf Renova
by TechMix

Calf Renova® is an easy-to-use capsule containing an essential oil, yeast & probiotics.

Calves susceptible to scouring or even first signs of diarrhea, need help recovering positive hydration status and appetite. Calf Renova helps to reduce harmful bacteria and restore the gut microbiome—quickly addressing enteric health issues and supporting recovery by enhancing intestinal microflora.

When to use Calf Renova:

- At first sign or during scouring

Key benefits:

- Helps eliminate enteric pathogens
- MOS – Pathogen binding
- Feeds beneficial bacteria and facilitates competitive exclusion of pathogens
- A natural, non-antibiotic alternative for enteric/scours health issues
- Less severity and duration of digestive upset
- Reduce or eliminate the use of antibiotics

Your non-antibiotic alternative!

BLUELITE C HydraTabs
by TechMix

An easy-to-use, effervescent oral hydration support supplement for young calves.

Convenience in an easy-to-use effervescent tablet, BlueLite C HydraTabs® provides readily digestible energy and electrolytes to help rehydrate calves and to promote a healthy digestive environment. Use fast-acting BlueLite C HydraTabs any time hydration support is needed.

When to use BlueLite C Hydra Tabs:

- Calves with scours/digestive upset
- Transported calves
- Dehydrated calves
- During environment changes

Key benefits:

- Effervescent, no stirring required
- Flavor designed for calves
- Single serving, no measuring required
- Compatible with water, milk or milk replacer

Most convenient calf electrolyte available!

Calf Perk® is a supplement to help support calves.

One of the more frustrating things you face is the potential of losing a newborn or young calf. Many of these weak calves just need a sudden boost of energy to get them going. Calf Perk® provides an immediate energy boost for newborns by helping increase their ability to stand and begin nursing.

When to use Calf Perk:

- Newborn calves that need a boost
- After a difficult birth
- During cold temperatures
- Depressed, lethargic received calves

Key benefits:

- Enhances calf vigor and suckle reflex
- Based on recommendations from human medicine for infant support
- Unique energy source
- Developed with industry experts
- Quick absorbing, fast acting

Awaken the Future.®

SELENIUM & VITAMINS A, D & E DOSING HAS NEVER BEEN EASIER

Vitaferst-Care™

is a convenient oral supplement designed to address the neonatal nutritional needs of calves, lambs and goat kids.

Most production animals' nutrient levels are normal at birth but can be rapidly depleted during the neonatal period. This can limit their potential. That's why supplements are often required when milk is the sole source of nutrients.

Vitaferst-Care's Oral Formulation Includes:

- Selenium** to promote growth
- Vitamin A** for promoting neonatal immunity
- Vitamin D** to support growth and metabolism
- Vitamin E** to stimulate the immune system
- Vitamin B₁₂** for cell growth and support of the immune system

One Oral Dose instead of multiple needles

Draw off cap and oral syringe included with every bottle

Give your livestock the best start possible with Vitaferst-Care™

Canadian Patent No. A8144435CA

First Defense® Bolus and Dual-Force® Gel Tube for Calf Scours

Prevention

An immediate **guaranteed** dose of immunity against E. coli and coronavirus infections, in a bolus or single-dose gel tube.

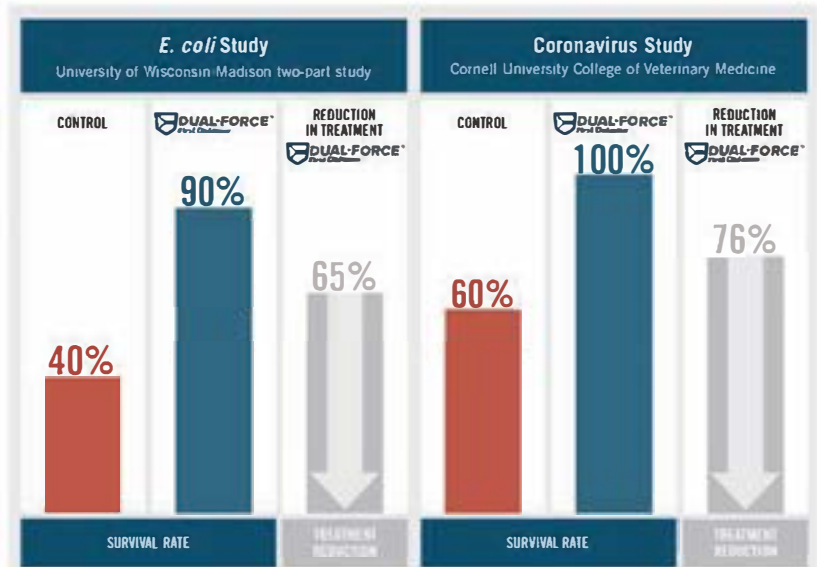

Due to refrigeration requirements shipping is NOT available for First Defense Dual Force

DUAL-FORCE PASTE ONLY Protocol Tracker:

The blue dye in the paste is non-digestible serving as a tracker through the system to ensure the calf has received treatment. First fecal stool after administration will be blue-green in color.

GO BEYOND VACCINATION®

Dual Force® First Defense® has been proven to provide protection against scour-related sickness and death in newborn calves.

USDA & CFIA approved, colostrum-derived antibody preventing bacterial and viral scours.

First Defense antibodies are purified from cows on a commercial scour vaccine program. In order to reach consistently high levels of E. coli and coronavirus antibodies, these cows are also hyper-immunized with multiple rounds of ImmuCell's proprietary vaccine in the weeks leading to calving. This antibody rich colostrum is then collected, purified, concentrated, and titer levels standardized to guarantee a substantial level of E. coli and coronavirus antibodies in every dose.

Directions: Administer Dual-Force orally after birth. Remove cap, place tip at the back of the throat, toward the cheek pocket. Initiate the plunger and over a few seconds, slowly squeeze entire tube contents into the calf's mouth, ensuring the calf swallows all of the gel. Dual-Force can be administered at the same time as colostrum.

Protocol Tracker: Blue dye is non-digestible serving as a tracker through the system to ensure calf received treatment. First fecal stool after administration will be blue-green in color.

Ideal's patented **D3 Detectable™** needles offer detectability, strength and sharpness. The detectable alloy added to the cannula of the D3 is proven 100% detectable in metal detection systems. The D3 has a thick wall cannula that will increase load strength and prevent bending and breaking up to 6 times over conventional needles. The D3 needles are ultra-sharp with a three-point precision ground tip for sharper cuts and easier penetration while staying sharp longer.

KERBL

Most common question
“Have you ever used it”

- I have - I do believe this guy wouldn't have made it without it.

REAL LIFE

@J2 LIVESTOCK

HK Calf Resuscitator

The HK Rheintechnik calf resuscitator looks like a large air pump. The suction cup is placed over the calf's nose and mouth.

1. Mucus is removed from the respiratory tract in one powerful stroke.
2. The mucus is expelled from the pump, then air is pumped into the airways. The lung's lobes and alveoli can unfold.

Premium Calf Coat

At temperatures below +10 C° the risk of illness increases. The Kerbl Premium Calf Coat provides protection against sudden changes in weather, avoiding cold stress in new born calves. Calf blankets support the immune system during the first few days, however calves generally wear calf blankets for 3-4 weeks. Calf blankets are not suitable for group housing.

- Back length: 80cm
- Maintains heat through PU foam layer
- Extremely water-resistant (up to a 5,000mm water column) and breathable 4-layer material
- Soft and sturdy
- Excellent fit and flexible size adaptation thanks to adjustable flexible belly guard, leg strap and Velcro fasteners on the chest
- Machine washable at 30 C°

CROSS 5 CATTLE COOLERS

Keep Those Needles From Freezing:

The Cross 5 Cattle Cooler is compatible with boiling water or heat packs; boiling water will last longer and is more effective on those really cold days BUT boiling water makes the cooler a little heavier to carry than heat packs. The drain plug makes it easy to empty the water once your day is complete!

Boiling Water

On the "Holster Side" put about 1"-2" of boiling water in the cooler and seal the lid on top, **DO NOT** fill the entire compartment with boiling water. It is the steam that will warm each holster and help stop the needles from freezing. (Filling the cooler with boiling water will "BAKE" the Vaccine)

Heat Packs

Reusable Heat Packs are recommended to be placed in the storage (left side) of the cooler if needed.

It is important to return the syringe to the holster between each use to prevent freezing.

Keeping Your Products Cool In The Summer Months:

The Cross 5 Cattle Cooler is compatible with Loose Ice, icepacks Or Both!

Ice Packs

Ice packs are recommended to be used in the storage (left) side of the cooler. Ice packs VS loose Ice will minimise and peeling of labels or soggy boxes that your vaccines are in.

Icepacks should be placed in each compartment that contains vaccines that need to be kept cool.

Ice

The holster side of the cooler can be kept cooler with Ice or Icepacks.

This is also a great place to keep extra drinks!

The capped holsters prevent any contamination between the Syringes and items stored underneath. The spacing between the holsters will fit most drinks and the spacing underneath the holsters will fit a standard size can.

Cattle Rattle

A Canadian Innovation! The *Cattle Rattle* is made from high impact flexible plastic designed to stand up to the rigors of hard use in all temperatures. It features a rubberized grip handle for added operator comfort. Each rattle is filled with beads, over time the noise of these beads elicits a response from the animal before physical correction is needed.

Flag Whip

Flag Whips are a lightweight tool used to sort, load and unload cattle, pigs, and other livestock. Simply swish behind the animal to prompt them to move forward. These Flag whips are also consistently used in training for horses by desensitizing them with new stimuli without overwhelming them.

12" x 12" durable nylon flags are hand-attached to the end of a braided, flexible, fiberglass rod. Flag Whips feature 10" rubber golf grips, and shaft lengths of 60" and 72".
