

about the Nitro-Draught™ System

For over 20 years, the Fizz Team has worked in the beverage industry to develop systems that maximize the profits and quality of draught beer, coffee, fountain soda and wine. Nitro-Draught™ has helped thousands of retailers eliminate waste and improve their quality.

BLEND SELECTION CHART FOR BEER STORED AT 38°F

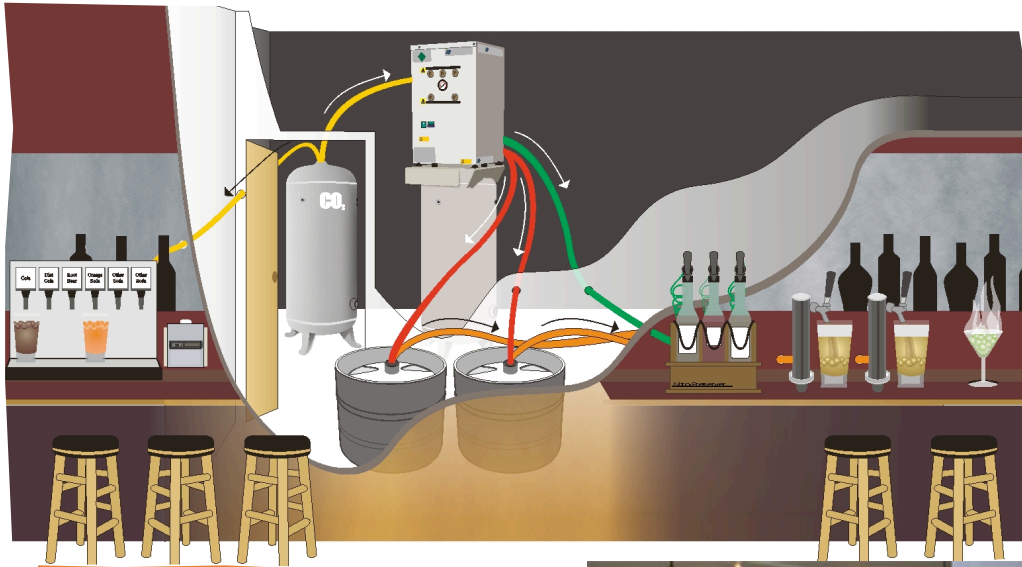

Beer, Wine & Coffee Done Right!

With Nitro-Draught™ you will improve the profitability and quality of your coffee, wine and beer program

# The Benefits of Nitro-Draught™

Nitro-Draught™ Systems have helped to improve the profitability and quality of draught systems by up to 50% and saved dozens of bottles of wine per month at our customers that serve draught beer and have a wine by the glass program. We do this by completing a detailed Beverage Profit Audit of the location to determine your specific needs. During the audit, we look at every aspect that affects the profitability and quality of the draught and wine systems.

## Wine by the glass profitability

Both red and white wines are subject to oxidation. Proper storage will minimize the chance of oxidation prior to opening, but once opened; a bottle of wine instantly begins to oxidize. Decanting creates a quick aeration, but over time; this oxidation will quickly change the wine and create an acidic flavor. This oxidation is part of creating wine based vinegars, but unacceptable for retail consumers. A 750ml bottle has 5 glasses if portioned properly. Portion control means profit and maximizes yields.

## The Nitro-Draught™ Systems

### Nitro-Draught™ 1200

Designed for small pubs and restaurants

- Up to 100 kegs per month
- Produce N<sub>2</sub> for wine & coffee
- Handsfree gas solution
