DRAUGHT VITAL™ VISUAL LEAK MONITOR BASICS

The Draught Vital™ Visual Leak Monitor help retailers find leaks that cost them money and potential shut down of their draught beer, wine and soda systems. The Draught Vital™ Visual Leak Monitor will display the current flow of gas to your beer cooler, wine and soda dispenser. It is critical that gas leaks be found and eliminated.

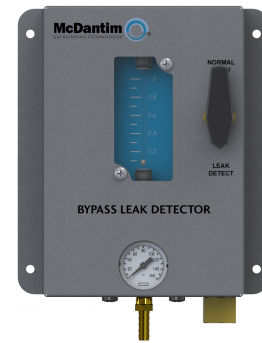

Leaks can occur 24 hours a day. Even a small leak of one-half cubic feet an hour actually wastes more gas each day than you would use to dispense two kegs, bottles of wine or gallons of syrup. With the Draught Vital™ Visual Leak Monitor, you can see in seconds if you have a leak and gauge how big the leak is. Let us help you make your gas systems leak free!

HOW IT WORKS

The Draught Vital™ Visual Leak Monitor is simple and easy to install (and can be used with a Nitro-Draught™ or Bulk CO₂) to locate different types of leaks. At 100+ psig inlet, the ball will

float at 2.8 scfh and max out at 12.7 scfh. Based on a CO₂ value of \$0.30 per pound, even the smallest leak can cost over \$800 per year. Note: For use with systems where maximum usage is a flow rate to 600 scfh or 70 lbs of CO₂ per hour.

SCALE	SCFH	\$/DAY	\$/MONTH	ANNUAL \$
0.1	2.8	\$2.30	\$64.49	\$840.65
0.4	6.1	\$5.03	\$140.70	\$1834.14
0.7	9.4	\$7.75	\$216.91	\$2827.63
1.0	12.7	\$10.47	\$293.13	3821.12

DRAUGHT VITAL™ VISUAL LEAK MONITOR SPECIFICATIONS

Description	SINGLE	DUAL	HIGH FLOW
Part Number	61090	98215	98220
