ENGINE FAILURE AFTER ROTATION (GEAR DOWN)

If adequate runway remains:
CLOSE BOTH IMMEDIATELY LA ND & STOP STRAIGHT AHEAD

If inadequate runway remains:

The decision to abort the take off or to continue must be based on the pilot's judgment considering the following factors:

Maximum Gross Weight..... Density Altitude
Obstructions..... Weather
Pilots Competency

If decision is made to continue:

Maintain Heading and airspeed above BLUE LINE or Vyse 105 if climb is needed. Bank 5 degrees into good engine.

LANDING GEAR UNSAFE WARNINGS

Red light indicates gear is in transit. Recycle the gear if the red light continues to illuminate.

Red light will illuminate when the gear warning horn sounds. The gear warning horn sounds when the manifold pressure drops to 14" hg in either engine or both and the gear is in the up position or when the gear selector is set in the up position when the airplane is on the ground.

EMERGENCY GEAR EXTENSION

Check the following before extending the gear manually.
