SCHEDULE

Schedule your heaters so that they switch on and off at a specific time.

Compatible with:

- Lutron™
- Crestron™
- Control4™
- Nomad™

and many others!

*requires a RS232 plugin

FREQUENTLY ASKED QUESTIONS

What home automation systems are compatible with Bromic outdoor heaters?

Bromic outdoor heaters can be linked to any home automation device that offers a RS232 communication connection. Many home automation systems will have a RS232 input either as standard or retrofit option.

What do I need to connect my Bromic outdoor heaters to my home automation system?

You choose how you wish to control your heater. A Bromic ON/OFF or dimmer control is required and together with the Bromic Smart-Home™ Link.transceiver, a 5V plugback transformer and 9-pin DB9 cable.

How does it work?

The Bromic Smart-Home™ Link sends radio frequency signals between the heaters and the Home Automation system. It can also work as a remote by programming/memorising the codes from another control device.

How is the Bromic Smart-Home™ Link installed?

The Bromic Smart-Home™ Link connects to the Home Automation system via a DB9 cable. **PLEASE NOTE:** The Bromic Smart-Home™ Link does not come pre-paired with any particular control devices. Please contact a professional installer or licensed electrician to help you integrate the device with your home automation system. Please refer to our installation notes (separate document).
