

Integrate RIASEC into Teaching Strategies

Great teachers help students fully engage in the discipline they are learning.

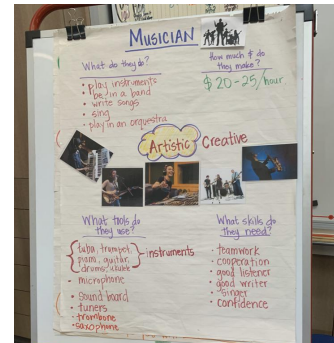

Adding the spice of “career” to any lesson is as simple as asking students to picture who uses this knowledge.

- Who gets paid to use this kind of learning?
- Who are the experts in this area?
- What companies use this information?

In short, “career” is one way to clear communicate the relevance and application of what students are studying.

All strategies that engage students in discussions, reflections, and opportunities to talk about relevance and application of what they are studying can benefit from RIASEC integration.

What are my current engagement strategies?	How could RIASEC integrate into those strategies?
