

WATER & WASTE WATER SOLUTIONS

Future Resources provides total solutions in Water, and Environmental issues for better tomorrows. We owe these to future generations because we inherited a good environment from our past generations.

Future Resources with our partners and alliance strive to introduce proven and new technologies in the field of Water desalination and treatment, and environmental related issues to ensure Green Future for the next generations to come.

FUTURE RESOURCES

ABOUT US

Future Resources was established in 2008 in Al Khobar, Kingdom of Saudi Arabia and since then it has grown steadily through adopting a unique philosophy in business development in the field of Water and Environment.

Future Resources was established by investors and technical people from Saudi Arabia and the GCC counties. The investors have long and vast history in the business that spans over four decades. The technical partners, on the other hand, served in the oil and gas, utilities and petrochemical industries for more than 30 years. This amalgamation of business and industrial experience has positioned Future Resources at a competitive edge within a short period of time. Future Resources adopt out of the box approach to hunt new and non-conventional business opportunities that are overseen by others.

Future Resources operates mainly in Saudi Arabia and the Gulf region but also stretches their business arms to other countries as well, through their alliances with reputable companies around the world.

Future Resources is relatively young but it was able to establish a noticeable footprint in its area of expertise in Saudi Arabia and the gulf region and it was able to sustain its market position in a highly turbulent business environment.

Future Resources Core Business are:

- Potable Water, Industrial and Domestic Wastewater and Sewage
- Environmental
- Support Services

VISION, MISSION & DEDICATION

Future Resources Vision

We will be among the best companies in Saudi Arabia and the Gulf Region to provide creative, reliable and cost effective solutions in the Water and Environment field.

Future Resources Mission

We are a Saudi and GCC company that provides total solutions in the field of Water desalination and treatment, Environmental and support services to the oil and gas, utilities and petrochemical industries in Saudi Arabia and the Gulf region through introducing proven technologies and adopting an out of the box approach to hunt new and non-conventional business opportunities that are overseen by others. Our creative people keep an open minded prospect of the future trends and needs and translate them to reality that keeps our plant green and safe for the next generations.

Future Resources Dedication

Each client is a unique client for us. Our technical team and our support staff are dedicated to accomplishing the highest level of quality in our work at all times. Each individual assigned to any undertaking is expected to reflect our commitment to quality results and extend this philosophy into all entities that may affect the overall quality of our performance.

DESIGN & ENGINEERING

Future Resources is totally committed to provide the highest quality products and services to clients. Upgraded and updated to keep up with the ever increasing market demand for the highest quality products and services.

Our design teams have developed water and waste water treatment plants and systems to suit a diverse range of conditions that range from the simple operation to the more sophisticated and complex arrangement.

As water and waste water treatment specialists, Future resources takes pride in developing creative, cost effective solutions to meet our clients diverse needs.

We are dedicated in our mission to provide quality products and services through globalization, diversification, innovative finance and human resources.

THE FUTURE

How Future Resources sees the Future?

The world in general and Saudi Arabia and the Gulf Region Countries (GCC) in particular witnessing unprecedented growth of Water. This became a major challenge to find means and ways to cope with this growth without hindering the environment.

Scarcity of water resources and depletion of existing ones in the Arab world and the GCC in particular is becoming a national security threat. Water desalination project in Saudi Arabia alone require more than 70 Billion US dollars in the next 10 years, an indication of coming Water War.

Future Resources solutions for water desalination and water treatment provide a Green alternative to ensure safe and affordable water resources to combat our Future needs.

INSTALLATION & OPERATION

Future Resources capable to install and operate industrial water and wastewater treatment plants for various industries, power plants, manufacturing facilities, mining operations, and military factories within national and local regulations, materials recovery, wastewater recycling and reuse, and achievement of economic benefits.

We have the knowledge and skills to completely install, commission, operate and maintain water and wastewater treatment plants.

SERVICES

Water

Future Resources is totally committed to providing the highest quality custom products and services to our clients, we are proud of our solid international reputation that places us at the forefront of evolving technology and expertise to improve the quality of water, thereby improving the environment and overall quality of life.

Our range of products & services include:

- Water Treatment
- Desalination
- Engineering and Services
- Smart and Grid Metering
- Municipal water supply treatment
- Municipal wastewater treatment
- Industrial water supply treatment (including seawater desalination treatment)
- Industrial wastewater treatment
- Material procurement
- Advanced wastewater treatment and recycling
- Municipal and industrial integrated wastewater treatment
- Design & consultation (D&C)
- Engineering procurement construction (EPC, etc.)
- Equipments integration (EI)
- Operation and management (O&M),
- Management & service (M&S)
- Water treatment equipments

MANUFACTURING & ASSEMBLY

Future Resources specializes in the manufacturing, maintenance, and operation of custom-made water and wastewater treatment systems, specifically designed to meet each client's needs. Our engineers and technicians offer in-depth knowledge and expertise in design, engineering, manufacturing, quality control and assurance, project management, construction management, value engineering, and international sales and marketing.

With strategically placed manufacturing and assembly facilities, our international affiliates can coordinate activities in an any desired global location.

When there are special requirements and specifications requested to suit individual needs, Future Resources will make modifications and custom build the units.
