

# TABLE OF CONTENTS

|                                                                             |     |
|-----------------------------------------------------------------------------|-----|
| <b>Foreword</b> .....                                                       | iv  |
| <b>Acknowledgements</b> .....                                               | vi  |
| <b>Chapter 1: Introduction to Recirculating Aquaculture Systems</b>         |     |
| 1.0 Background .....                                                        | 1   |
| 1.1 The Optimistic View .....                                               | 1   |
| 1.2 Recirculating Aqua Systems (RAS).....                                   | 2   |
| 1.3 RAS Advantages .....                                                    | 4   |
| 1.4 World Market Needs.....                                                 | 7   |
| 1.5 Market Dynamics.....                                                    | 8   |
| 1.6 Overview of Recirculating Aquaculture Systems (RAS).....                | 10  |
| 1.7 Can RAS Compete? .....                                                  | 11  |
| 1.9 Some Quick Case Histories.....                                          | 18  |
| 1.10 History Lesson on Failures .....                                       | 20  |
| Advice from the Trenches.....                                               | 22  |
| 1.11 Interactions Between Objectives, Resources, B.Strat., and Design ..... | 23  |
| 1.12 Terminology and nomenclature.....                                      | 25  |
| 1.13 “The Short Course” .....                                               | 26  |
| 1.14 References.....                                                        | 27  |
| <b>Chapter 2: Water Quality</b>                                             |     |
| 2.0 Introduction.....                                                       | 31  |
| 2.1 Physical Properties.....                                                | 32  |
| 2.2 Water Quantity Requirements.....                                        | 33  |
| 2.3 Water Sources .....                                                     | 35  |
| 2.4 Water Quality Standards .....                                           | 36  |
| 2.5 Water Quality Parameters .....                                          | 38  |
| 2.6 Measurements .....                                                      | 53  |
| 2.7 References.....                                                         | 61  |
| <b>Chapter 3: Mass Balances, Loading Rates and Fish Growth</b>              |     |
| 3.0 Introduction.....                                                       | 65  |
| 3.1 Production terms .....                                                  | 73  |
| 3.2 Water Quality Design Targets.....                                       | 74  |
| 3.3 Fish Growth .....                                                       | 80  |
| 3.4 Design Examples .....                                                   | 86  |
| 3.5 References.....                                                         | 97  |
| List of Symbols.....                                                        | 99  |
| <b>Chapter 4: Culture Units</b>                                             |     |
| 4.0 Introduction.....                                                       | 101 |
| 4.1 Tank Construction Materials.....                                        | 101 |

|      |                                     |     |
|------|-------------------------------------|-----|
| 4.2  | Stocking Density .....              | 103 |
| 4.3  | Design Examples .....               | 107 |
| 4.4  | Culture Tank Engineering .....      | 108 |
| 4.5  | Water Velocities .....              | 109 |
| 4.6  | Round Tanks.....                    | 112 |
| 4.7  | Cornell-Dual Drain Design.....      | 121 |
| 4.8  | Raceways.....                       | 126 |
| 4.9  | Carrying Capacity Issues .....      | 136 |
| 4.10 | Stock Management Issues .....       | 138 |
| 4.11 | Scale Issues.....                   | 139 |
| 4.12 | Mechanisms To Remove Dead Fish..... | 139 |
| 4.13 | References .....                    | 140 |

### **Chapter 5: Solids Capture**

|     |                                               |     |
|-----|-----------------------------------------------|-----|
| 5.0 | Overview .....                                | 147 |
| 5.1 | Solids Balance .....                          | 149 |
| 5.2 | Basic Design Parameters for Round Tanks ..... | 151 |
| 5.3 | Solids Generation .....                       | 151 |
| 5.4 | TSS Physical Characteristics.....             | 152 |
| 5.5 | Removal Mechanisms .....                      | 153 |
| 5.6 | Design Example – Solids Capture .....         | 186 |
| 5.7 | References .....                              | 193 |
|     | List of Symbols.....                          | 199 |

### **Chapter 6: Waste Management & Utilization**

|     |                                                 |     |
|-----|-------------------------------------------------|-----|
| 6.0 | Introduction .....                              | 201 |
| 6.1 | EPA Effluent Limitation Guidelines - 2004 ..... | 202 |
| 6.2 | Waste Management .....                          | 205 |
| 6.3 | Waste Characteristics .....                     | 206 |
| 6.4 | Waste Management Overview .....                 | 207 |
| 6.5 | Storage, Thickening, And Stabilization.....     | 208 |
| 6.6 | Utilization/Disposal.....                       | 237 |
| 6.7 | Design Example – GeoBags .....                  | 241 |
| 6.8 | References .....                                | 245 |
|     | List of Symbols.....                            | 247 |

### **Chapter 7: Biofiltration**

|     |                                                        |     |
|-----|--------------------------------------------------------|-----|
| 7.0 | Introduction .....                                     | 249 |
| 7.1 | Nitrification (Autotrophic Bacteria).....              | 249 |
| 7.2 | Nitrification (Microbial Floc).....                    | 255 |
| 7.3 | Impact of Water Quality Factors on Nitrification ..... | 258 |

|     |                  |     |
|-----|------------------|-----|
| 7.4 | Biofilters ..... | 262 |
| 7.5 | References.....  | 282 |

### **Chapter 8: Biofilter Design**

|      |                                                           |     |
|------|-----------------------------------------------------------|-----|
| 8.0  | Introduction.....                                         | 287 |
| 8.1  | Generalized Engineering Considerations.....               | 288 |
| 8.2  | Design Parameters: Where do you start? .....              | 289 |
| 8.3  | Design Example: Biofiltration .....                       | 295 |
| 8.4  | Design Example: Trickling Tower.....                      | 296 |
| 8.5  | Design Example: RBC.....                                  | 300 |
| 8.6  | Design Example – Floating Bead Biofilter .....            | 301 |
| 8.7  | Basic Design Concepts: Fluidized-Bed Sand Biofilter ..... | 304 |
| 8.8  | Design Example: Microbead Biofilter .....                 | 319 |
| 8.9  | Design Example: Moving Bed BioReactor (MBBR).....         | 321 |
| 8.10 | References.....                                           | 323 |
|      | List of Symbols.....                                      | 325 |

### **Chapter 9: Denitrification**

|      |                                                      |     |
|------|------------------------------------------------------|-----|
| 9.0  | Introduction.....                                    | 327 |
| 9.1  | Background.....                                      | 328 |
| 9.2  | Unit Processes for Denitrification.....              | 331 |
| 9.3  | Factors Controlling Denitrification.....             | 334 |
| 9.4  | Effect of Denitrification on Alkalinity.....         | 337 |
| 9.5  | Effect of Denitrification on Phosphate Removal ..... | 339 |
| 9.6  | Effluent versus On-line Treatment.....               | 339 |
| 9.7  | Types of Reactors .....                              | 340 |
| 9.8  | MBBR Processes for Denitrification .....             | 342 |
| 9.9  | Design of Denitrification Reactors .....             | 347 |
| 9.10 | Design Example.....                                  | 349 |
| 9.11 | References.....                                      | 354 |

### **Chapter 10: Gas Transfer**

|      |                                             |     |
|------|---------------------------------------------|-----|
| 10.0 | Introduction.....                           | 361 |
| 10.1 | Dissolved Gases – Fundamentals.....         | 361 |
| 10.2 | Gas Transfer.....                           | 369 |
| 10.3 | Gas Transfer Options .....                  | 374 |
| 10.4 | Degassing: Carbon Dioxide (Nitrogen) .....  | 387 |
| 10.5 | Design Example – Aeration/Oxygenation ..... | 395 |
| 10.6 | References.....                             | 396 |
|      | List of Symbols.....                        | 397 |

### **Chapter 11: Ozonation and UV-Irradiation**

|      |                                                   |     |
|------|---------------------------------------------------|-----|
| 11.0 | Introduction.....                                 | 399 |
| 11.1 | Factors Influencing Disinfection Efficiency ..... | 399 |
| 11.2 | Aquaculture Water Characterization.....           | 402 |
| 11.3 | UV Irradiation.....                               | 402 |

|      |                                                        |     |
|------|--------------------------------------------------------|-----|
| 11.4 | Inactivation Of Fish Pathogens by UV Irradiation ..... | 407 |
| 11.5 | Ozonation .....                                        | 414 |
| 11.6 | Other Methods of Disinfection .....                    | 429 |
| 11.7 | Design Example Influent Treatment.....                 | 430 |
| 11.8 | Conclusions .....                                      | 433 |
| 11.9 | References .....                                       | 434 |

**Chapter 12: Fluid Mechanics and Pumps**

|      |                                    |     |
|------|------------------------------------|-----|
| 12.0 | Fluid Mechanics .....              | 441 |
| 12.1 | Frictional Losses.....             | 444 |
| 12.2 | Fitting Losses .....               | 450 |
| 12.3 | Design Example: Head Loss .....    | 455 |
| 12.4 | Measurement of Flow.....           | 457 |
| 12.5 | Pumps and Pumping.....             | 464 |
| 12.6 | Airlift Pumps .....                | 471 |
| 12.7 | Design Example - Circulation ..... | 474 |
| 12.8 | References .....                   | 479 |
|      | List of Symbols.....               | 480 |

**Chapter 13: System Monitoring and Control**

|      |                                                        |     |
|------|--------------------------------------------------------|-----|
| 13.0 | Introduction .....                                     | 481 |
| 13.1 | Parameters to Monitor .....                            | 482 |
| 13.2 | Monitoring Sensors and Equipment Options.....          | 488 |
| 13.3 | Automatic Phone Dialers and Notification Systems ..... | 491 |
| 13.4 | Backups Systems are not an Option .....                | 494 |
| 13.5 | Computer Based Systems .....                           | 495 |
| 13.6 | Design Example – Monitoring .....                      | 498 |
| 13.7 | System Design and Maintenance.....                     | 498 |
| 13.8 | Construction Recommendations.....                      | 499 |

**Chapter 14: Building Environmental Control**

|      |                               |     |
|------|-------------------------------|-----|
| 14.0 | Introduction .....            | 503 |
| 14.1 | Heat Transfer.....            | 504 |
| 14.2 | Air Quality Control.....      | 508 |
| 14.3 | Building Considerations ..... | 512 |
|      | List of Symbols.....          | 515 |

**Chapter 15: System Management and Operations**

|      |                                       |     |
|------|---------------------------------------|-----|
| 15.0 | Introduction and Site selection ..... | 517 |
| 15.1 | Backup Systems.....                   | 518 |
| 15.2 | Laboratory Facilities.....            | 523 |
| 15.3 | Quarantine Facilities.....            | 525 |
| 15.4 | Waste Management .....                | 525 |
| 15.5 | Storage—Feed and Chemicals .....      | 526 |
| 15.6 | Fish Product Handling.....            | 526 |
| 15.7 | Transporting Live Fish .....          | 528 |

|       |                                               |     |
|-------|-----------------------------------------------|-----|
| 15.8  | Purging and Off-Flavor.....                   | 546 |
| 15.9  | Post Harvest Handling .....                   | 547 |
| 15.10 | Feed Storage.....                             | 548 |
| 15.11 | Handling Fish.....                            | 550 |
| 15.12 | Labor .....                                   | 551 |
| 15.13 | Access .....                                  | 551 |
| 15.14 | Operations.....                               | 552 |
| 15.15 | Miscellaneous Operations.....                 | 558 |
| 15.16 | Record Keeping and Maintenance .....          | 559 |
| 15.17 | How to Collect, Analyze & Interpret Data..... | 563 |
| 15.18 | Care and Use of Laboratory Animals .....      | 563 |
| 15.19 | References.....                               | 564 |

### **Chapter 16: Fish Health Management**

|       |                                                             |     |
|-------|-------------------------------------------------------------|-----|
| 16.0  | Introduction .....                                          | 565 |
| 16.1  | Biosecurity.....                                            | 565 |
| 16.2  | Practices to Reduce the Risk of Pathogen Introduction ..... | 567 |
| 16.3  | Practices to Reduce Pathogen Spread.....                    | 573 |
| 16.4  | Reducing Susceptibility to Infection and Disease .....      | 575 |
| 16.5  | Monitoring and Surveillance.....                            | 576 |
| 16.6  | Biosecurity Check.....                                      | 580 |
| 16.7  | Diagnosis.....                                              | 584 |
| 16.8  | Treatment .....                                             | 589 |
| 16.9  | Zoonotic Diseases .....                                     | 592 |
| 16.10 | Aquatic Animal Health Regulations .....                     | 593 |
| 16.11 | Fish Health Management Services veterinarian.....           | 593 |
| 16.12 | References.....                                             | 594 |
| 16.13 | Resources .....                                             | 595 |

### **Chapter 17: Economic Realities and Management Issues**

|       |                                                  |     |
|-------|--------------------------------------------------|-----|
| 17.0  | Introduction.....                                | 597 |
| 17.1  | Case Histories .....                             | 598 |
| 17.2  | Lessons Learned.....                             | 601 |
| 17.4  | Species Selection .....                          | 605 |
| 17.5  | Competitiveness of RAS.....                      | 606 |
| 17.6  | Infrastructure & Capitalization .....            | 608 |
| 17.7  | Scale Effects and Risk .....                     | 615 |
| 17.8  | Labor Requirements.....                          | 617 |
| 17.9  | Predicted Costs of Production.....               | 618 |
| 17.10 | Predicted Costs of RAS Produced Tilapia .....    | 623 |
| 17.11 | Economic Comparison to Broilers and Catfish..... | 629 |
| 17.12 | References.....                                  | 632 |

### **Chapter 18: Fish Nutrition and Feeds**

|      |                      |     |
|------|----------------------|-----|
| 18.0 | Introduction.....    | 633 |
| 18.1 | Feed Management..... | 633 |

|       |                                              |     |
|-------|----------------------------------------------|-----|
| 18.2  | Selection .....                              | 635 |
| 18.3  | Growth Performance .....                     | 635 |
| 18.4  | Feed Quality .....                           | 637 |
| 18.5  | Physical Characteristics.....                | 638 |
| 18.6  | Practical Feed Formulation.....              | 639 |
| 18.7  | Important Aspects Of Aquaculture Feeds ..... | 645 |
| 18.8  | Physiological Relationships.....             | 649 |
| 18.9  | Water Chemistry And Dietary Needs.....       | 651 |
| 18.10 | Functional Anatomy Of Digestion .....        | 653 |
| 18.11 | Minerals.....                                | 655 |
| 18.12 | Vitamins .....                               | 658 |
| 18.13 | Feedstuff Selection .....                    | 664 |
| 18.14 | Feedstuff Digestibility .....                | 671 |
| 18.15 | Pelleted, Expanded, and Extruded Feeds.....  | 675 |
| 18.16 | Floating Feeds .....                         | 677 |
| 18.17 | Summary .....                                | 678 |
| 18.18 | References .....                             | 679 |

### **Chapter 19: Aquaponics: Integrating Fish and Plant Culture**

|       |                                                    |     |
|-------|----------------------------------------------------|-----|
| 19.0  | Introduction .....                                 | 685 |
| 19.1  | System Design .....                                | 688 |
| 19.2  | Fish Production.....                               | 692 |
| 19.3  | Solids.....                                        | 694 |
| 19.4  | Biofiltration .....                                | 699 |
| 19.5  | Hydroponic Subsystems .....                        | 701 |
| 19.6  | Sump.....                                          | 704 |
| 19.7  | Construction Materials .....                       | 704 |
| 19.8  | Component Ratios .....                             | 705 |
| 19.9  | Plant Growth Requirements .....                    | 707 |
| 19.10 | Nutrient Dynamics.....                             | 709 |
| 19.11 | Vegetable Selection.....                           | 714 |
| 19.12 | Crop Production Systems .....                      | 717 |
| 19.13 | Pest and Disease Control .....                     | 718 |
| 19.14 | Approaches to System Design.....                   | 719 |
| 19.15 | Economics and Selecting which plants to grow ..... | 729 |
| 19.16 | References .....                                   | 730 |

### **Appendix**

|                         |     |
|-------------------------|-----|
| Appendix Directory..... | 735 |
|-------------------------|-----|

### **Tables**

|            |                                                                                         |     |
|------------|-----------------------------------------------------------------------------------------|-----|
| <b>A-1</b> | Conversion Factors for Commonly Used Terms in Aquaculture .....                         | 737 |
| <b>A-2</b> | Fish Health Conversion Factors .....                                                    | 744 |
| <b>A-3</b> | Broad List of Conversion Factors: Inch:Pound (IP) to System<br>International (SI) ..... | 745 |
| <b>A-4</b> | Physical Properties of Water .....                                                      | 747 |

|      |                                                                                                                                              |     |
|------|----------------------------------------------------------------------------------------------------------------------------------------------|-----|
| A-5  | Percentage of Free Ammonia (as NH <sub>3</sub> ) in Freshwater at Varying pH and Water Temperatures.....                                     | 748 |
| A-6  | Dissolved Oxygen (mg O <sub>2</sub> per Liter, ppm) at Saturation in Freshwater, Brackish Water, and Seawater at Different Temperatures..... | 749 |
| A-7  | Hardness Conversion to Other Units of Measure .....                                                                                          | 750 |
| A-8  | Standard U.S. Atmospheric Pressure at Different Altitudes.....                                                                               | 750 |
| A-9  | Alkalinity Supplement Properties.....                                                                                                        | 751 |
| A-10 | Opening Sizes of U.S. Sieve Series Designation Number.....                                                                                   | 752 |
| A-11 | Dry Air Components .....                                                                                                                     | 752 |
| A-12 | Solubility of Four Major Gases in Water.....                                                                                                 | 752 |
| A-13 | Maximum and Minimum Monthly Average Outside Temperatures for Selected USA Locations in Degrees °F.....                                       | 753 |
| A-14 | Unit Area Thermal Resistance's (R-Values) of Typical Building Construction and Insulation Materials .....                                    | 754 |
| A-15 | Allowable Concentrations of Carbon Dioxide at Standard Temperature and Pressure to the Nearest 25 ppm .....                                  | 755 |
| A-16 | Valve Basics and Selection Tips.....                                                                                                         | 756 |
| A-17 | Plastic Properties for Various Types of Pipes .....                                                                                          | 757 |
| A-18 | Size and Properties of PVC Pipe Schedule 40 and 80.....                                                                                      | 758 |
| A-19 | PVC Pipe Friction Chart for Pipe and Length Loss for Schedule 40(eng).....                                                                   | 759 |
| A-20 | PVC Pipe Friction Chart for Pipe and Length Loss for Schedule 40(met) .....                                                                  | 760 |
| A-21 | Tank Volumes for Various Depths and Diameters .....                                                                                          | 761 |
| A-22 | Temperature Equivalents Between Celsius and Fahrenheit .....                                                                                 | 762 |
| A-23 | Electrical Measurements.....                                                                                                                 | 763 |
| A-24 | Maximum length of wire in feet for 2% maximum voltage drop .....                                                                             | 764 |
| A-25 | Current carrying capacity of hard-usage flexible cords (Type S, ST, SO, STO, SJ, SJT, SJO, SJTO).....                                        | 765 |
| A-26 | Full load currents in amperes for single phase ac motors.....                                                                                | 765 |
| A-27 | Full load currents in amperes for three phase squirrel cage and wound rotor motors .....                                                     | 765 |
| A-28 | Recommended pipe sizes for standard air (0.075 lbs/ft <sup>3</sup> ) for three pipe air velocities.....                                      | 766 |
| A-29 | Area under the Normal Distribution Curve .....                                                                                               | 767 |
| A-30 | Percentage Points of the Student's t-Distribution.....                                                                                       | 769 |
| A-31 | Electroconductivity Measurements .....                                                                                                       | 770 |

### Supplemental Information

|      |                                                                             |     |
|------|-----------------------------------------------------------------------------|-----|
| SI-1 | Determination of Statistical Differences: t-Test for Unequal Variances..... | 771 |
