

Sac Van Rental

Passenger Van Safety Review

Introduction

Passenger vans have a high center of gravity, which creates a risk of rolling during sharp turns. Please review the following passenger van driving safety guidelines for your passenger van rental.

Passenger Van Safety Checklist

1. You and your authorized drivers are willing to demonstrate your ability to operate and maneuver the van prior to the rental.
2. You and your authorized drivers verify that you have a minimum of 3 years of driving experience.
3. It is the responsibility of the renter and authorized drivers to ensure all passengers are secured in a safety belt.
4. Passengers must be loaded properly, from front to back. If the van is not fully loaded, the front most seats must be utilized. Absolutely no overloading of passengers.
5. Extreme caution is required on curved roads. Gradual recovery is required if wheel(s) drop off the road surface. Sharp and/or erratic steering causes rollovers.

Acknowledgement

You acknowledge that you and your authorized drivers have been instructed of the dangers and proper safety protocols for operating a passenger van.
