

# Quick Start Guide

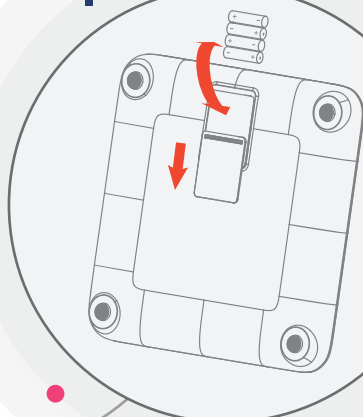

Vital Remote Links Body Scale

BS-2001-G

1

Insert four AA batteries into the back of the scale. Once inserted, the scale will perform an initial secure pairing with the mobile network.

2

The symbols  and  will display while the scale is pairing. The secure pairing process normally takes around fifteen seconds, but may take up to two minutes.

3

Insert four AA batteries into the the back of the scale. Once inserted, the scale will perform an initial secure pairing with the mobile network.

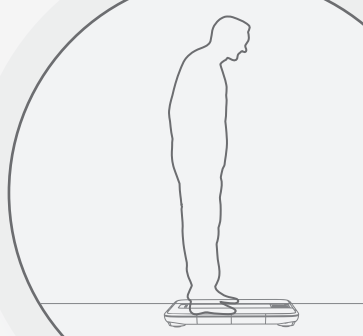

4

Lay the scale on flat and level ground away from water or other hazards. Don't use the scale while it is wet or otherwise slippery.

5

Step onto the scale and try to hold still while it calculates your weight. The display will flash a number once a measurement is locked in.

6

Once a measurement is locked in, the scale will save it and begin the data transmission process. You do not have to stay on the scale during data transmission.

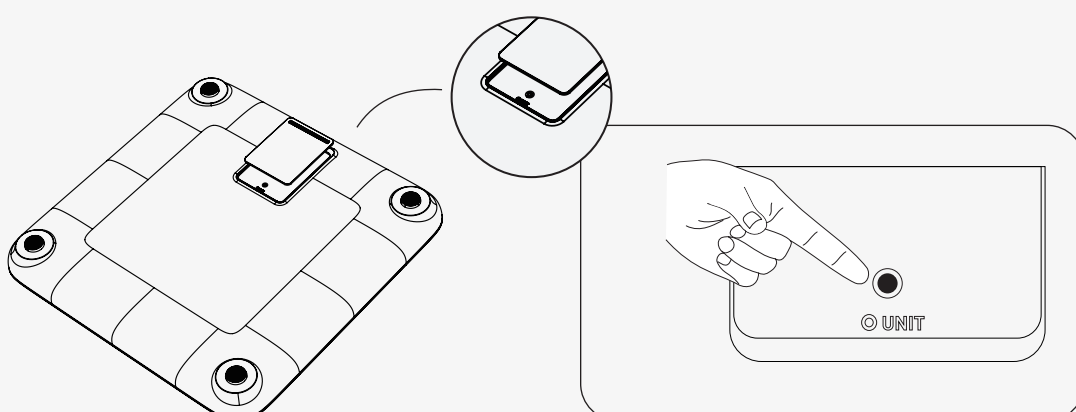

7

During transmission, the scale display will flash the icon to show it is connecting. Transmission normally takes around five seconds but can take up to a minute if signal is weak.

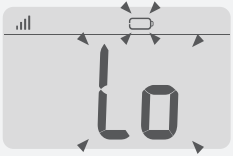

8

If transmission is successful, the symbol is shown. If connection fails, an error (E1) is displayed. In this case, the measurement is saved and will be sent on the next successful connection.
