About The Aesthetic Society

Leading the Way in Aesthetic Plastic Surgery

For over 50 years Aesthetic Society members have gone beyond being just board-certified. With more than 3,000 members spanning the globe, The Aesthetic Society is at the frontier of innovation in aesthetic plastic surgery. Our mission is to gather a community of like-minded and highly trained surgeons to influence patient advocacy, public education, and to educate the next generation of aesthetic plastic surgeons.

If you're looking for the most accurate aesthetic plastic surgery information from the premier qualified experts, we're here to help.

As a leading voice in aesthetic plastic surgery and cosmetic medicine, we care deeply about safety, and we always put patients first.

About the Aesthetic Plastic Surgery National Databank

The 2022 Aesthetic Plastic Surgery Statistics were compiled using the **Aesthetic Neural Network** (ANN) data. The Aesthetic Society partnered with Ronan Solutions™ (Phoenix, AZ) to develop ANN. ANN connects directly to participating Aesthetic Society member plastic surgeons' practice management systems to retrieve real-time, de-identified, billing data. The data is reviewed and mapped by subject matter experts to generate a dynamic, comprehensive, longitudinal, valid and reliable repository of procedural and billing data. ANN's automated, real-time data access also eliminates other drawbacks associated with surveys such as low response rates, cross-sectional data, inaccurate recall, need for manual data entry and the limited number and scope of questions that can be included.

For the 2022 Statistics, aggregate data from 200 participating plastic surgery practices across the U.S. that consistently provided data quarterly between 2019 and 2022 were analyzed. The procedure counts were extrapolated to estimate nationwide statistics. These statistics have a standard error of +/- 6.8% at a 95% level of confidence. To enhance the reliability of trends, all prior data have been restated to reflect the consistent sample of participants.

Aesthetic Plastic Surgery Key Findings

Surge in Nonsurgical Procedures contributes to overall increase in Aesthetic Procedures

- Total aesthetic procedures increased **14%** in 2022 thanks to nonsurgical procedures jumping **23%**. Surgical procedures (which accounts for just **20%** of all aesthetic procedures, though **70%** of revenue) were down **12%**.
- Nonsurgical procedures were boosted by large increases in infusions, skin treatments, body contouring, and neurotoxins.
- All of the most popular surgical procedures were down in 2022. Body procedures were down **13%**, and breast procedures were down **11%**.
- While 2022 showed a **12%** drop in total surgical procedures, it is compared with a particularly strong year in 2021.
- Surgical procedures began soaring in the second half of 2020 and reached their peak in Spring 2021. 2021 eclipsed pre-pandemic surgical counts by **55%**.
- Liposuction experienced a larger surge than the other most popular surgical procedures during the pandemic, rising **85%** vs. 2019 levels (compared with **74%** rise for Abdominoplasty and 39% for Breast Augmentations). While down 12% from 2021, the procedure was still **63%** above its pre-pandemic level.
- While surgical procedures fell in 2022 vs. 2021, surgical procedures remained **37%** above 2019 counts. The increase was fueled by huge gains in body procedures, such as liposuction (**+63%**) and abdominoplasty (**+55%**).
- Nonsurgical procedures were slower to receive a boost from the pandemic. They increased significantly in Spring 2021 and may have reached their peak in Spring 2022.
- Overall, the number of procedures surgeons perform each quarter have been well-balanced*, though Spring (April–June) has been the most popular season.
- Approximately **55%** of all surgical procedures have been performed in the first half of the year. This pattern is largely consistent among body and breast procedures as well as the other surgical procedures.
- The average plastic surgeon performed **252** surgical procedures in 2022, compared with **289** in 2021 (**13%** fewer procedures per surgeon). However, their surgery counts remained **27%** above their pre-pandemic level of **198** in 2019.
- On average, the cost of a surgical procedure increased **12%** in 2022, and the cost of a non-surgical procedure decreased **10%**. Prior to 2022, surgeons' fees had remained largely unchanged in recent years.
- Women accounted for **95%** of all procedures.
- The most popular age group for surgical procedures was 51-70 year olds, accounting for **36%** of surgical procedures. The 36-50 age group represented **30%**, followed closely by 17-35 year-olds with **27%**. Patients over 70 represented **8%** of surgical procedures.

* 2020 was excluded from the quarter-by-quarter analysis.
