Surge Bed Configurator

Use the Surge Bed configurator in Oregon Capacity System to mark surge beds as active or inactive. Do so by selecting the icon labeled 'Tile Configurator' and then the 'Surge Configurator'. From there users can filter down to relevant hospitals and units. Click the blue pencil (edit) icon and toggle the icon on or off to have OCS use the Surge Bed Configurator. If turning on the configurator, users can then select if surge beds are active surge or inactive. This can be done for all beds or at the bed level.

REMINDER

Active surge beds are included in designated level of care capacity and in active surge capacity. Inactive surge beds appear in inactive surge capacity only.
